>
>=====
>
>CNI NEWS INTERVIEWS COLONEL PHILIP CORSO
>
>[From the moment he arrived in Roswell, New Mexico last week,
Colonel Philip
>Corso was in constant demand for press interviews. Despite his
advanced age,
>Corso was energetic, lucid and very generous with his time. CNI News
editor
>Michael Lindemann was fortunate to be invited to privately interview
the
>Colonel in his hotel room on Saturday morning, July 5. Also present
were the
>Colonel's son, Philip Jr., and William Birnes, co-author with
Colonel Corso
>of the bombshell book, "The Day After Roswell."
>
>In the book, Corso says that a genuine alien spacecraft, with
bodies, was
>recovered near Roswell, New Mexico in 1947. He says he personally
viewed one
>of the dead alien bodies. More importantly, he says that during the
early
>1960s, he was stationed at the Pentagon under the command of General
Arthur
>Trudeau, and was assigned the super-secret task of parceling pieces
of alien
>spacecraft wreckage out to various defense-related companies who
could back
>engineer the alien material into useful human technology. From this
program,
>Corso says, sprang such strategically important developments as the
>integrated circuit for computers, fiber optics, advanced night
vision
>technology and lasers.
>
>Lindemann arrived at Corso's room as a previous interview was
concluding. The
>Colonel and Mr. Birnes were explaining how Corso had arranged for
the safe
>passage of 10,000 Jewish refugees out of Rome to Palestine just
after the end
>of World War II. Lindemann picked up on this theme to start the CNI
News
>interview.]
>
>Michael Lindemann: Not only are you a highly decorated military
officer, but
>it seems you've always been willing to be a bit of a maverick when
it comes
>to "doing the right thing," even if it might make some other people
>uncomfortable -- to the point where this latest disclosure about
Roswell
>seems essentially in character for you. But this is a bigger

disclosure, a

>bigger departure from the norm than your previous actions, don't you think?

>

>Philip Corso: Well, some other things have been pretty important. Like when I

>moved those 10,000 Jews, I thought nothing of it, but people said what a big

>thing it was. Putting Rome back on its feet was important. I don't think this

>is bigger than some of those things. Even the looks on the families' faces in

>front of Congress [when he testified about American POWs left in North

>Korea], that was pretty important to those people. And this one here, I

>think, fits in with all those others. Yes, it's important, because like they

>say, it might have changed the course of the world. Well, I have to give a

>lot of credit to General Trudeau, who made it possible, and to the other

>people who were with me. Maybe we changed the course of the world. The thing

>that I've done now is going to affect the future. That's why I bring the

>children in on it, the young ones. We're old now, we're going to be moving

>on. But they're going to be here. Let them know what happened. I think it's

>of great importance that those children are going to read this and know what

>happened and what it came from, and that it was true. It did happen. They

>have to know what's involved, and what it's leading to. They're the ones who

>will be involved in what it leads to. From that point of view, it's the most

>important thing I ever did.

>

>ML: Where do you think it does lead to? You allude in your book to the

>possibility that maybe there's a hostile potential here.

>

>PC: When you're in the military, you always have to figure on that hostile

>part. You can't disregard that. Our motto was, "Just in case, we're going to

>be ready." What's it going to be in the future? We called it at R&D [the

>Army's Research and Development Department at the Pentagon] the dawn of a new

>age, maybe a new world. The world's not going to stop. Maybe this was a seed

>that was sown to start a new world. Look what they did with the [computer]

>chip -- in just a few years, how it blossomed out into the supercomputer. I

>said to General Trudeau, "What are we unleashing on the world, General? If

>this can integrate with the brain, there's great danger." He said,
"Yes,
>Phil, but the people coming after us, we hope, will possibly
understand and
>take this into consideration. But maybe not in our lifetime." He
didn't see
>it in his lifetime. He died three years ago.

>
>ML: Do we know how to build the kind of craft that they found at
Roswell?

>
>PC: I think that we will know. Where we were missing out on a lot of
this was
>in the propulsion and guidance systems. We came to the conclusion
years ago,
>and now it's starting to take hold even among scientists, that the
reason we
>missed out on this was that the extraterrestrial himself was the
guidance
>system. He was part of the system. We never figured on that.

>
>One day I was walking in the hall with General Trudeau, and I turned
to him
>and said, "General, I think that son of mine is a little bit crazy.
He says
>engines talk to him." The General turned to me and said, "Phil,
don't ever
>say that again. People have certain relationships with engines, with
solid
>matter, that we don't understand. But it's there." See, this is all
starting
>to come forward now.

>
>And it was uncanny that this book had to break when this thing is
happening
>here at Roswell. I never expected what I saw last night, what I've
seen here.
>[From the time he arrived in Roswell, Colonel Corso was surrounded
by press
>and people seeking interviews.] Someone like me has always lived in
the
>shadows. To all at once see this happening around me, and I'm a
focal point
>-- I feel like I should be home sitting in my easy chair, not here.
And yet,
>last night [at the Friday evening banquet] I was almost mobbed.

>
>ML: Did you know that the American public was this hungry for this
>information, and this ready to believe you?

>
>PC: Sure I knew. My nephew is a research director at [inaudible]
university,
>and I have letters the young man wrote to me. He said, "Uncle Phil,
please
>tell them to tell us the truth. We won't pull our hair out or panic.
We want
>to hear this." In all of my interviews lately, I've been saying I'm
going to
>prove this to you people. My own experience: I commanded a battalion
of 1500

>men. Average age, nineteen and a half years old. Those boys didn't panic and
>run. I told my exec[utive officer], my god, we're leading babies into combat.
>They didn't panic. They stood and fought some of the greatest armies the
>world has ever seen, and defeated them. A lot of them died. But they didn't
>run, they fought. So I say, this is the younger-age people -- they're not
>going to panic. Let them know. They want to know. That Orson Welles show [War
>of the Worlds, 1938] has thrown a lot of people off. It's not going to be
>like that.

>
>ML: Do you feel we are ready to know the truth on this?

>
>PC: We've been ready. A long time ago.

>
>ML: Did you have to willfully break any personal oaths or promises to the
>military or the country in order to do what you've done?

>
>PC: No. The oath that I held was with the General. I held that oath until he
>died, because he was an honorable man, an honest man. I liked him. He was a
>great man. As far as being an Army officer, I kept my oath for thirty-five
>years. I did not violate any security, and I had all the clearances. I was
>the one who used to stop people from violating security. I did not reveal
>anything that's harmful or should be kept quiet.

>
>ML: There have been rumors and speculations that Roswell, and what came from
>Roswell -- the way we exploited Roswell technology -- might not have been the
>very first time such a thing happened. There have even been indications or
>speculations that the Nazis had done such a thing, that some of their
>extraordinary technological developments may have come from a similar source.
>What do you think about that?

>
>PC: Yes. True. I had German scientists on my team. I discussed this with
>them. I discussed this with Oberth, von Braun. I was part of Project
>Paperclip with General Trudeau. There's an example in the book. In the middle
>of the book there's a photograph of Edward O'Connor, one of Truman's
>poker-playing buddies at the White House -- he was a Soviet expert -- and
>General Trudeau, myself and Victor Fediay of the Library of Congress, who
>spoke fluent Russian. Fediay was going to Russia. I gave him a series of

>questions. I said, "Ask a KGB general these questions [pertaining to UFOs]."

>So Victor comes back and says, "Phil, I asked him the questions. You know

>what he said? He said, 'I know what you want. But do you want me killed?'"

>Now, that's Russia. Germany? Yes. Canadians and British also, and something

>in Italy. There were crashes elsewhere, and they gathered material too. The

>Germans were working on it. They didn't solve the propulsion system. They did

>a lot of experiments on flying saucers. They had one that went up 12,000

>feet. But where all, we and they, missed out was on the guidance system. In

>R&D we began to realize that this being was part of the guidance system, part

>of the apparatus himself -- or itself, because it had no sexual organs. This

>is where most people missed out.

>

>ML: Do you think, then, that if we are going to develop a way of interstellar

>travel, we will have to develop a similar relationship to our spacecraft?

>

>PC: Man can't travel in space today. Those clones were created to travel in

>space, specifically. They can travel in space. Our muscles, our bones, our

>brain, can't take space travel, even today. We can't do it.

>

>ML: We can do it to some extent.

>

>PC: Well, when they go to Mir, they stay up there two or three months, and

>when they come off, they have to be carried off. Their bones won't hold up.

>If they stayed a little longer, they'll never be able to walk. But the big

>thing that is not talked about is [that] the brain is affected up there.

>

>ML: How is that?

>

>PC: Gravity, radiation -- it comes right through that ship. Look at Senator

>[John] Glenn, he saw "fireflies" coming through his capsule. They weren't

>fireflies, they were some kind of electromagnetic thing that came through

>there. Those [alien] beings are created specifically to travel in space.

>

>ML: Speaking of Senator Glenn, my understanding is that he's sort of

>ambivalent on the subject of UFOs. How would you characterize it?

>

>PC: He told me exactly what he was. I met with Senator Glenn. I was supposed

>to meet him for half an hour, and he kept me for an hour and a half.
During
>the course of the conversation, we talked about UFOs, and he said,
"Colonel,
>I'm an agnostic." I said, "But you didn't say you don't believe,"
and he
>laughed. That's his exact word to me -- he's agnostic.
>
>Then we got into Project Horizon. I had the whole project
[document], 310
>pages, and he wanted it. I had to give it to him. He was amazed when
he saw
>that [in] 1959, long before he went up in the capsule, we had all
the plans
>made up to put a military colony on the moon. Defense killed it on
us. They
>didn't like the Army, so they took it away from us and killed it,
and made
>NASA.
>
>ML: Is it possible for any civilian to get their hands on the
Project Horizon
>report today? How do we find out about this?
>
>PC: It's unclassified. I was the declassifying officer. There's 50
pages of
>it in [my] book. I wrote to the Army Corps of Engineers historical
division,
>and I told them where it was and what it was, and they found it and
sent me
>copies of it immediately. The original was in color. Beautiful. I'd
like to
>get my hands on it. [Corso pages through Appendix One of his book as
he
>speaks.] Look, there's a lunar lander. This was 1959. The best
brains in the
>world worked on this, all the Germans, all von Braun's team, they
worked on
>this. I talked to a German in Huntsville, Alabama, a few months ago,
and he
>said, "I remember that. I worked on it." This was an amazing
document. And
>here's General Trudeau's instructions that started it. Lately, my
scientist
>friend at the Institute of Advanced Studies in Texas [probably a
reference to
>Dr. Hal Puthoff] had a meeting with the top [scientists] at NASA,
and he
>threw Project Horizon on the table, and he says they were shocked.
They
>couldn't believe it. They never knew about it. Defense killed it on
us; and
>the CIA had a hand in killing it.
>
>ML: Just the other day, the Air Force issued their latest official
>explanation of what happened at Roswell. I'm sure you must have had
a few
>chuckles over it. How are you responding to this? And how is the
press
>treating you, now that you've made your position so clear and now

that the

>Air Force has said, again, that it's all a bunch of baloney?

>

>PC: They're treating me better than I ever expected. I expected criticism. As

>far as the Air Force, I fought alongside them in Korea. I have a lot of

>friends in the Air Force, and I will not criticize a sister service. But I

>will criticize their superiors, the Secretary of the Air Force and so forth.

>It amazes me and I cannot comprehend why they do this. They don't have to do

>this. Why do they want themselves to look like fools? Even the young kids are

>telling me, "Dummies? Dummies?" and then they laugh. I can't comprehend why

>they put that out. What is in their mind? If I'd have written something like

>that, General Trudeau would have thrown me out of the top window of the

>Pentagon.

>

>ML: What about the problem with Senator Strom Thurmond's foreword to your

>book? Simon and Schuster has issued a bland apology, saying they're going to

>pull Thurmond's foreword out of future printings of the book. What was your

>understanding with the Senator?

>

>PC: I've known Strom Thurmond for almost a lifetime. He's a very honest,

>sincere and courageous individual. We've always been close. I found out

>recently that his staff did it. I don't think the old man knew it, and I

>think the old man will eventually call me. We were too close for too many

>years. I sent the original foreword for the other book [Thurmond had written

>a foreword for a book titled "I Walked With Giants"] back to the Senator, and

>I told him, "If you want to send me another statement for this new book,

>that's fine. If you don't want to, that's fine too." I discussed UFOs with

>him. I gave him a copy of Project Horizon. About a week later, not only did I

>get the two pages that are in the book, but I also got a note from him

>authorizing Simon and Schuster to print it. Bill Birnes has all that. He has

>the original foreword -- the one I sent back -- and he has the new one.

>

>ML: Bill Birnes told me when I arrived here today that he was under the

>impression that Thurmond or perhaps his staff had been pressured from higher

>up to back out of this. Can you say anything about this?
>
>[Colonel Corso's son, present during the whole interview, made very visible
>hand signals to the Colonel at this point indicating that the Colonel should
>not answer this question.]
>
>PC: I can't verify that one way or another.
>
>ML: Forgive me, Colonel, if I ask Mr. Birnes to say something about this.
>[Birnes was in the room embroiled in a side conversation at this time.] Bill,
>the Colonel has just declined to address the question whether or not Senator
>Thurmond or his staff may have been pressured from higher up. You indicated
>that he might have been. Can you explain?
>
>Bill Birnes: This is just my understanding of it from stories I heard. The
>staff really wasn't aware of the agreement that Colonel Corso and the Senator
>had. It was an agreement between two friends, more than two business associates. The staff went ballistic when they found out. In other words,
>"How dare you do something and not consult your staff about what you're
>writing?" So the staff's immediate preliminary reaction was, "Oh no, this was
>the foreword for the book 'I Walked With Giants.'" What the staff didn't know
>was that Colonel Corso had sent that first foreword back to the Senator and
>got a new foreword in return. I have copies of both. So, obviously, they
>weren't in the loop. When they were told that this is a new foreword the
>Senator wrote, the story immediately changed. "Well, we weren't told, and we
>can't do this." Finally, one of the staff members said, "Don't you understand
>that the Senator cannot be on a book cover, writing a foreword, for a book
>that says the United States government utilized alien technology to win the
>Cold War? Don't you realize this man is fourth in line to succeed the
>president? Don't you know this man is chairman of the Armed Services
>Committee? NO, it can't be." So they went to Simon and Schuster and said,
>"You have to pull the cover. Take it off the shelves, get the foreword out,
>write a new cover." Simon and Schuster said absolutely not. Then they made it
>very clear to Simon and Schuster, saying, "You're part of a large conglomerate. Your large conglomerate has to deal with government regulatory
>bodies. [According to Birnes, Simon and Schuster is owned by

Paramount, which

>in turn is owned by Viacom.] Do you really want to be in this position?

>Viacom goes before the FCC. You have a constituency of stockholders that you

>have to respond to.

>

>ML: You're suggesting political blackmail.

>

>BB: It's absolutely political blackmail.

>

>ML: Can you verify that this is what was going on?

>

>BB: I have to say that this is my understanding of what was going on because

>of confidential discussions I had with legal [personnel] at Simon and

>Schuster, and from statements that the staff members made to the Corso family

>with respect to the pressure that was being put on them to get this foreword

>out of the book. What I do know for a fact is that they demanded that Simon

>and Schuster pull the book off the shelves. Simon and Schuster flatly refused

>and said they had a signed release. Then [the Senator's staff] came back and

>said, "As a matter of courtesy, if we say that the Senator really wasn't

>clear on the nature of the book..." and Simon and Schuster said, "Well, if

>it's a matter of courtesy, then we can certainly understand that in the heat

>of material passing back and forth, misunderstandings can happen."

So, that

>was the basic agreement.

>

>ML: So, once they got the niceties of language straightened out, the agreement was that the foreword would be pulled from future printings of the

>book?

>

>BB: Yes, exactly. But it will remain as it is, with this cover, for this

>printing.

>

>ML: Cutting to other news, there was a story that broke here yesterday

>morning [Friday, July 4] about an object that had been tested by several

>scientists. Its content was almost entirely pure silicon, with small traces

>of metals such as germanium and zinc. This sounds suspiciously like some kind

>of solid state artifact, and it showed such highly anomalous isotopic ratios

>that a scientist was willing to say on the record that it had the appearance

>of extraterrestrial manufacture. Can this be compared with anything you saw

>at the Pentagon, Colonel?

>

>PC: I don't know anything about it. It doesn't even sound similar to me.

>

>ML: According to your book, you spent most of your time dealing with the

>artifacts and debris of the Roswell incident, but what about the aliens

>involved, and more especially, what about the alien situation today? What do

>you think is the nature of the alien presence, if any, on earth today?

>

>PC: From my knowledge, at the moment, I don't know of any alien presence on

>earth. There are still reports of flying saucers, of course, but I don't know

>of any report of a body, or anyone who has seen [an alien] lately.

>

>ML: What do you say about people such as abductees who claim to be actually

>seeing these creatures?

>

>PC: My reports were thirty-five years ago. If there's anything now, I'm not

>aware of it. I know just what I saw in those days, and the truth like I lived

>it. If there's any aliens now, I'd like to see them. I don't know where they

>are. I'd like to see if they compare with the ones that I saw.

>

>[Due to the Colonel's other commitments, the interview ended here.]

>

>==+++==+++==+++==+++==+++==+++==+++==+++==+++==

>

>

>
