In the video, according to the pilots own words - the act of jamming an active radar return signal, is "technically" an act of war. He references his smart avionics indicating to him that the radar return signal is being jammed. - after the F-18 radar is turned on and beamed (focused) at the UFO using the same avionics systems that actively target craft using radar type weapons systems. It seems to me that the craft was probably trying to avoid a conflict rather than pose one. RT is using that 5 min portion of the four hour interview to try and create narrative.....is what i think

...even if the craft were an ARV, there would still be a disconnect between the pilot and the ARV in terms of its effects.on aircraft avionics

I think I see where the interview is going - the pilot is trying to say that his 2 seater FA-18 Hornet radar was jammed - much more likely is that the pilot lacks the knowledge and experience which would explain the ET's advanced technology - and its effect on the FA-18 jet avionics

The video does click through to youtube - the video interview with the pilot is nearly 4 hours - I'm watching it.

Interesting - the pilot now is claiming that the "UFO" committed an "act of war" but the article doesn't even touch that subject and instead regurgitates what's already been discussed. When you click on the video link to get more information about what act of war was committed - you get the error message that the video has been removed from several sites.
