QUESTION of MPG-  
CAPABILITY.

>I hold expired U.S. patent 3,890,161 DIODE ARRAY, a device which  
>refrigerates as it releases electrical power. Chips usually produced for  
>other purposes can serve as Demonstration of Concept prototypes are  
>available. The claim that energy can be endlessly recycled is more modest  
>than claims that energy can flow from nowhere. This device has been met by  
>silence. The Second Law of Thermodynamics is cited as a proof it can not  
>work. The Second Law is not serious but it is venerated. I urgently want  
>to release this device to the world. I estimate that a chip comprizing an  
>array of 100 billion vertical diodes / sq. cm. would yeild 100 watts /sq. cm.  
>Once the process is set up production will be cheap.  
>Thank You,  
>Charles M. Brown  
>  
>Please reply with my name on the subject line.

I hold expired U.S. patent 3,890,161 DIODE ARRAY, a device which refrigerates as it releases electrical power. Chips usually produced for other purposes can serve as Demonstration of Concept prototypes are available. The claim that energy can be endlessly recycled is more modest than claims that energy can flow from nowhere. This device has been met by silence. The Second Law of Thermodynamics is cited as a proof it can not work. The Second Law is not serious but it is venerated. I urgently want to release this device to the world. I estimate that a chip comprizing an array of 100 billion vertical diodes / sq. cm. would yeild 100 watts /sq. cm.  
Once the process is set up production will be cheap.  
Thank You,  
Charles M. Brown  
Please reply with my name on the subjectline.
