Hi Steve,

The link  ave you is a radio show were  and  were invited guests.

They are talking about an important French site the F.E.A. were you can find all kinds of information on the subject and the President is  who was the first guest. I have to go visit the site to have a better idea of their work. It seems pretty elaborate.

Here is a very short resume of the show.

Radio Ici et maintenant : title of the show: The UFO wave

 President of the F.E.A.

The role of the F.E.A. is to regroup different européen associations and their goal is to inform the public regarding the UFO subject.

Commandant 
 President 3A.F.

The French are ready for open discussion on the UFO subject. They have noticed an opening too from other countries. Their goal is to have official recognition of the reality of inexplicable observation happening for many years in every country and all continents. They want to discuss the eventual intelligence that they suppose. They also want to understand why our society (planetary) didn't recognize that fact until now. The French explain it by the fact that the US army in the 40 and 50 couldn't put the UFOs down and it was not good for them to show the world that they were not in control of the situation especially during the cold war.

Some of the informations about the secret documents on the subject were taken from the books of 

The French strongly suggest that since the UFO are way in advance scientifically, there is much reason to think there is a civilization with a program behind their visits based on a ethic, a moral, rules, a deontology that fixes those rules, a system of knowledge, a project of some sort to allow us to open our eyes and our ears which is not always easy for us to do.

The goal of the 3 A.F. is to avoid the classic reaction dictated by the medias and work in a more rigorous scientific manner and give the result of their research in april 2010.

That's it in a nutshell.

Good night
