Dr.Greer: I know for a fact that at least in 1976-77 , the RCMP Operational Manual contained within its voluminous sections a very detailed section outlining how and to whom UFO sightings were to be reported. I found this out when one night a young man in my detachment reported a UFO and I was the hapless junior officer who was sent out to investigate. I came to the eventual conclusion that he had seen nothing more than a nearby airport search light . However,when I got back to the detachment, I was surprised by my NCO who plunked the thick Ops Manual in front of me and turned to a long section on how to handle UFO reports. I remember that a copy of my lengthy report had to go to Ottawa NRC "Meteor Research Branch", as well as RCMP Divisional HQ and National HQ in Ottawa. Incidentally, among the detailed instructions in the manual was the requirement to check local airport RADAR. When I phoned the local airport I was surprised to hear the response to my embarrassed questions of whether or not they had had any UFOs on radar that night... "Not tonight but we get them all the time."

About 8 years later after this, I met the source of my previous email who, as I

recall ,worked for the NRC "Meteor Research Branch" and inadvertently told me about the..." 3 species."

Dear [REDACTED]

Thank you for this very interesting insight. We are aware that, often, mundane projects serve as cover for classified activities as you describe.

If you have any further corroborating witnesses or documents to this or similar events, I would very much appreciate you sharing this with me.

We will keep at Disclosure- it is time!

Best regards,

Steven M. Greer MD
Founder and Director
The Disclosure Project

Dr. Greer: As a retired senior Investigator of the Canadian RCMP Security Service and its successor, CSIS (Canadian Security Intelligence Service-- your FBI), I can tell you that you and Paul Hellyer (former Canadian Minister of Defence) are on the right track.

In the 1980's, during the course of a routine security investigation for the "Meteor Research Branch" of Canada's NRC (National Research Council), I came across information from a reliable source who told me that Canada, the USA, & Great Britain have been in continuing contact with ..."three species from outer space". Seeing the shock on my face, the source realized that I was not privy to this information and immediately changed the subject.

However if you are looking for info on Canadian UFO's, based on this source a classified section within the "Meteor Research Branch" would be a good place to look.... BEAR in mind that the Meteor Research Branch is an open unclassified branch of NRC , however it is probably also used as cover for the classified section. Keep poking away at the Government... something is bound to fall out !
