On Jan 28, 1996 a "meteorite" or UFO that seemed to have broken up while emitting multicolored sparks, crossed 20 states from north to south in Mex. It was reportedly flying at 3x normal meteorite speed and was filmed by many people including professionals all over Mex. [REDACTED] has videos of the event. When it flew over Teotihuacan debris fell from the sky and children in the area picked it up. A municipal official, [REDACTED], was given a sample which he later gave to me. If you look at it closely it has minute holes or tubes in it. This material (without the tubes) is exactly like samples found in UFO circles in Israel by [REDACTED], which was analyzed in Israel and found to be a highly refined form of silicon with unusual properties.

Good Luck, [REDACTED]
