

May 6, 1987

Dear

A reoccurrence of cancer, a very bad farming situation and the resultant financial problems that needed immediate attention, precluded the possibility of my involvement in any but priority duties. Therefore, your July 30, 1986, letter is in a box with many others that need to be addressed, researched, answered and sent.

I am still in the midst of this battle, so my reply will be short.

The events you are familiar with had to have happened as stated by both Bob Jacobs and myself because the statement made from each of us after 17 years matched. What was on the film was seen only twice by Bob Jacobs, once in Film Quality Control and once in my office at the CIA attended showing. I saw it four times. Once in my own quality control review and editing for the General and his staff; once in review with the Chief Scientist and his assistant; once for the Commanding General with only one of his staff; and the fourth time with the Chief Scientist, his assistant, the three government men and Bob Jacobs.

I ordered Lt. Jacobs not to discuss what he saw with anyone because of the nature of the launch, the failure of the launch mission and the probability that the optical instrumentation (the film) showed an interference with normal launch patterns. Now for your questions:

1. The object was saucer-shaped. (Dome? Don't remember.)
2. Do not know the names of the CIA personnel.
3. Only assumptions from the seriousness of the situation.
4. I was ordered not to discuss any of what was seen or discussed during the screenings. I only passed my order, as the ranking optical instrumentation officer, on to Lieutenant Jacobs. There was no one else involved.
5. No film was ever released from our archives without a signature. I ever signed out film when we had launch showings to VIPs in the General's office on short notice. However, I released the film to the Chief Scientist over his signature, then they departed.
6. The articles in the Enquirer and OMNI on my part and the statements made by both Dr. Jacobs and myself were factual. The statements you referred to that an "Air Force spokesman said, 'there is nothing on film and that the rocket did hit its target,'" makes no sense. Means the film is available and the records of the launch and its are also available. If the Air Force spokesman did review the launch and saw nothing, it could not have been the perpetuated such quick security action.

5/6/87

7. Further? If the government wishes to withhold such vital information which most certainly relates to our basis Star Wars research, then this information must be protected.

Working in special projects my entire Air Force career from the earliest airborne radar in WWII, Air Defense Systems during the Korean War, Airborne Reconnaissance Ssystems during the Cold War, Photo computerized systems of unprecedented utilization and intelligence fathering during the Vietnam conflict, (therefore a veteran of four wars and more combat area time than most), I may be over protective of our security.

I can only say in regard to your research that in all my activities to date, indications point to one fact...the information gathered from space is very favorable to our side.

Sincerely yours,
