

April 30 1985

From about 1973 to 1981 we spent a lot of time working with pyramids and other related energies. We did not always like the results we got from the inside energies. We found that the energies coming off the top of the pyramids seemed to be safer on long term usage. The problem with using the tips of crystals or pointed tops of pyramids is that you have to use a stand or the water, plant, etc. will fall off. Plants and water need to be put into containers. All such devices change the energies or block most of the energies that you want to reach the water or plants.

Therefore we made a stand that would not block the energies of the pyramid form we working with. We stopped going any further for our stand gave off more energy than the pyramid we placed under it, (about 10 time more energy). Not only did the stand give off more energy but added white light to the objects placed under it.

The following is how to make the pyramid energizer and stand.

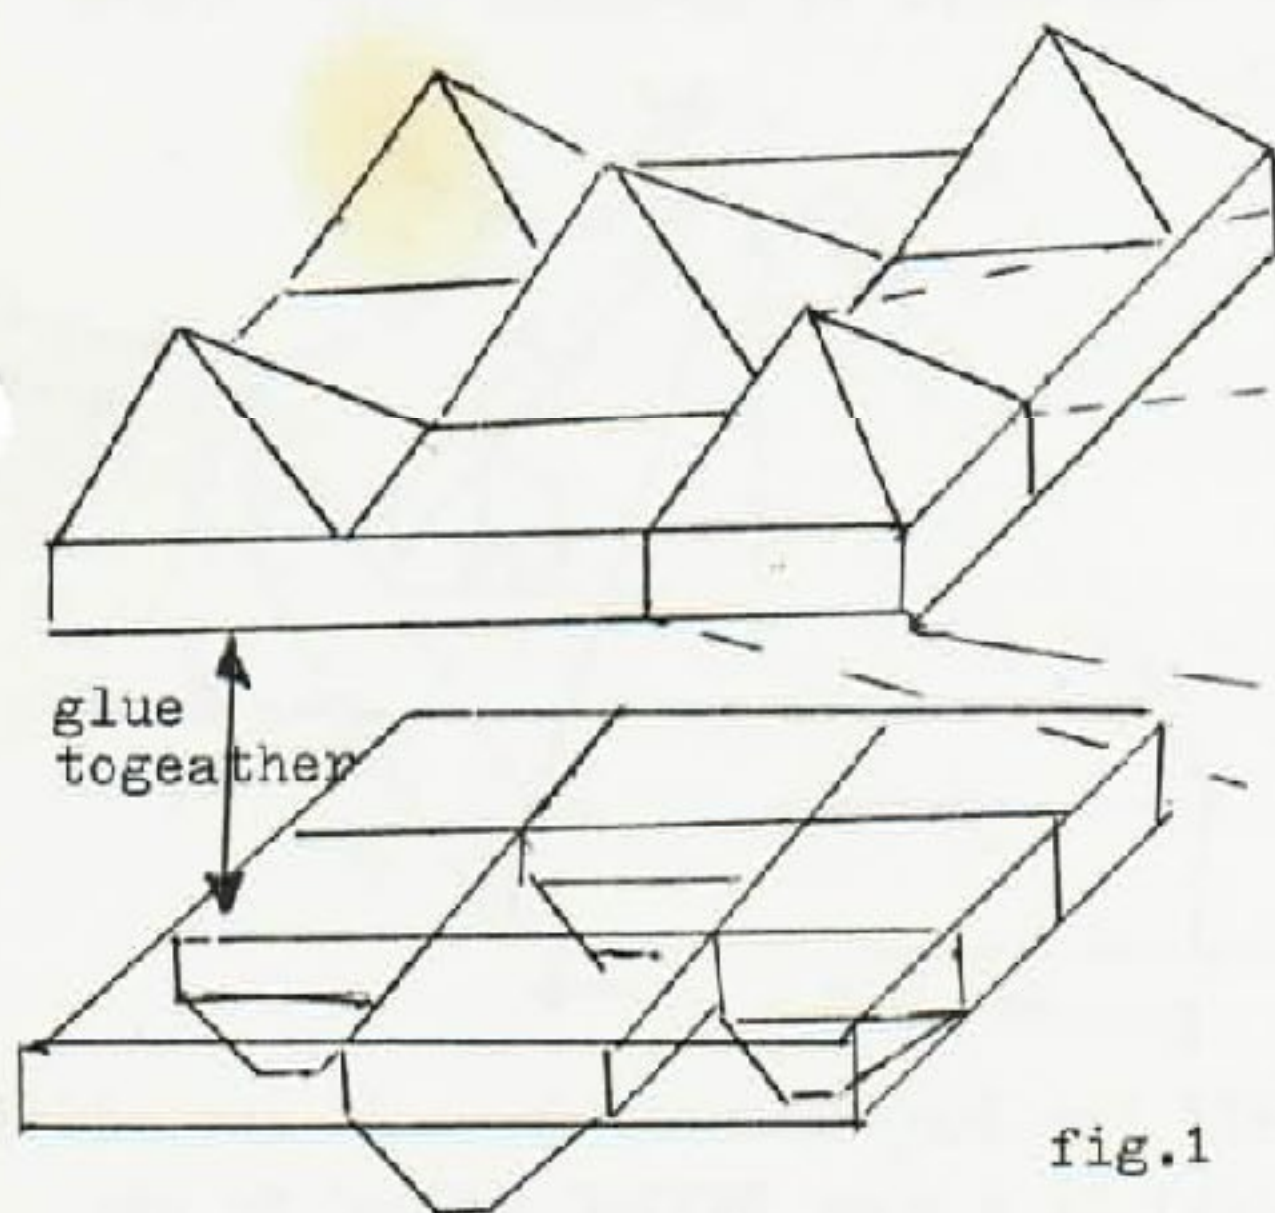

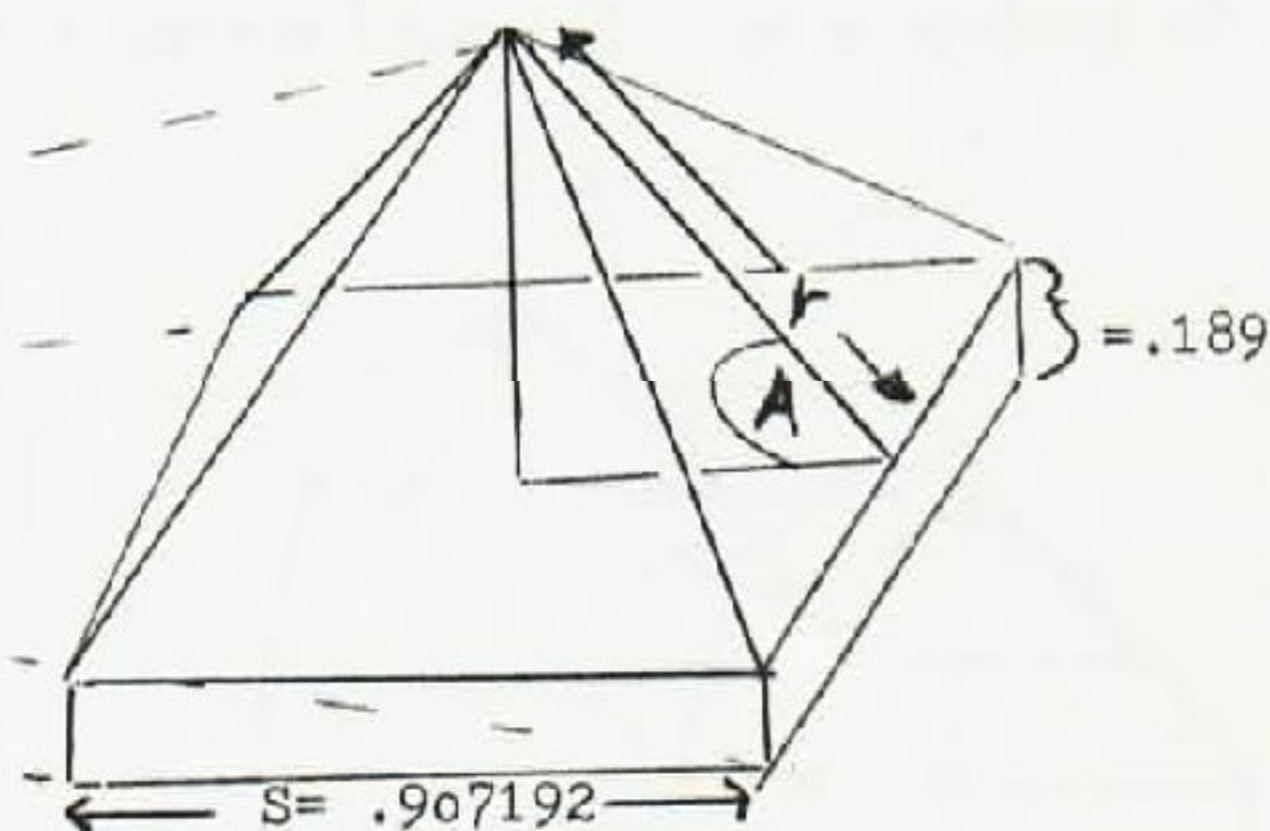

fig.1

ANGLE A = 51.42857143 this angle is very close to the Great pyramids.

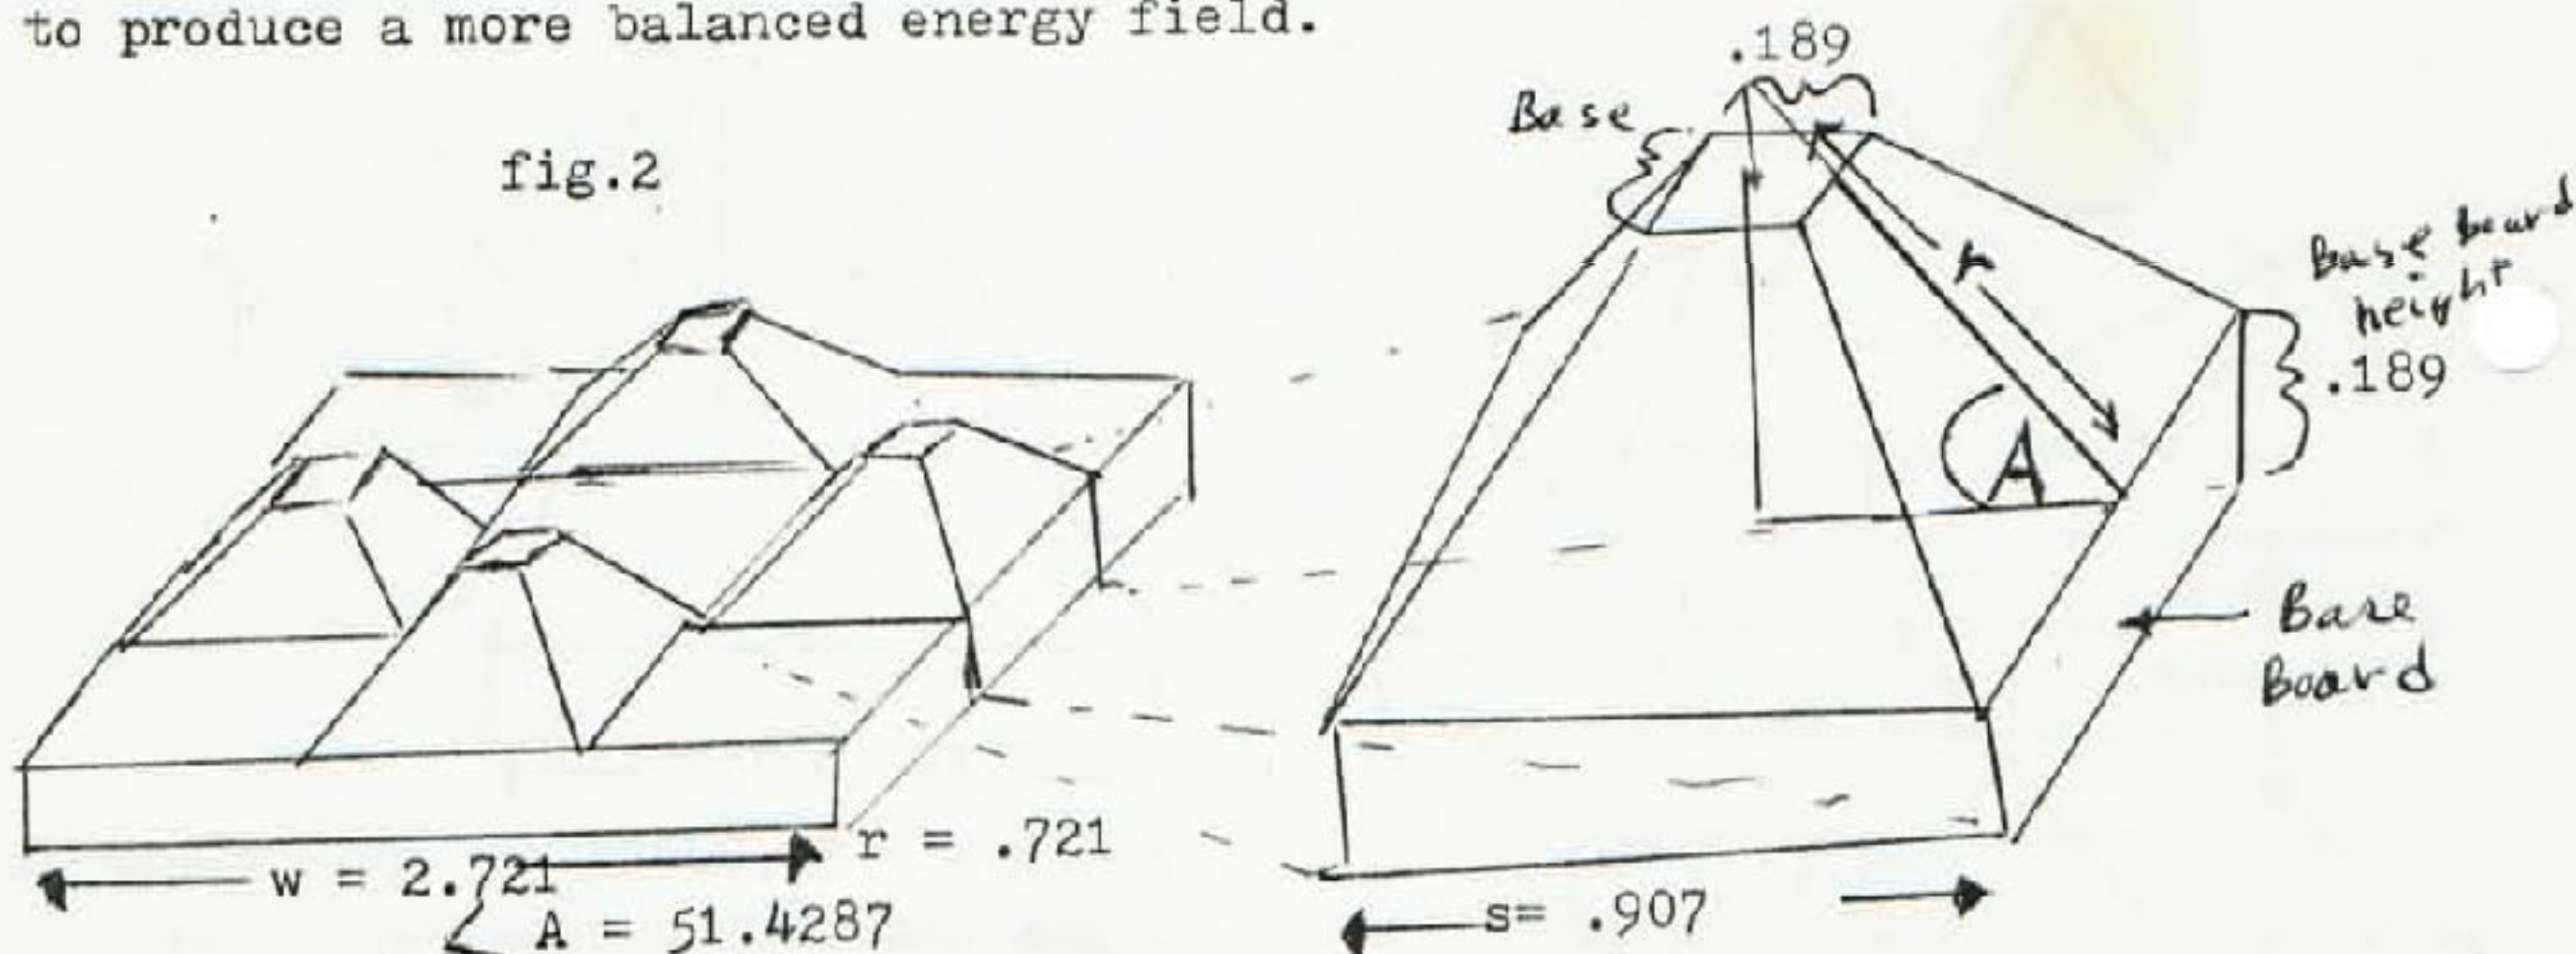

$$\frac{360^\circ}{7} = 51.4287143$$

we used Clear glue (snow foam product, inc. El Monte, Calif. 91731 It is a ultra violet transmitting glue. it is a alcohol soluble glue used for making styrofoam projects. Frank nursery has it in Michigan. By taking the Great pyramid and reducing it to .907 inch base using the changes in earth mass and wave the angle phi of the great pyramid or pi matches 360° divided by 7 = 51.4287143 at a base size of .907 which is its correct wave length in inches. as you can see there are 4 pyramids on bottom and five on the top. the four bottom ones are flatted.

Energy escapes from all five coners of a pyramid. As you can see the top pyramid the four conner pyramids inside conners energise the center fifth pyramid in fig. 1 The four upside down ones also have there 4 inside conners energising the center top pyramide. As you can see in the center of the stand is a glass and metal sphere. Reich used Organic than metal to gather Orgone energy and placed the person or thing to be charged on the metal side. The Reich Insititute foundthat in high Humidity or wet areas that wood or cotton did not work as well or at all but glass wool could be or had to be used. That is why the sphere on the bottom is glass and metal on top(a steel ballbaring was used). Both Wilhem Reich and Pat Flanagan found that spheres were one of the best shapes for concentrating or collecting these energies and then re-radiate the energies .

The top five pyramids give off the blue expanding energies (yin) the male son and father energies(spirit force). The four upside down pyramids give off the red contracting energies (yang) the female daughter and mother energies (earth force). This configeration helps to comebine both forces to produce a more balanced energy field.

fig.2

We feel that what ever you take off the top, measure the base and add this to the bottom ~~height~~ ^{of the Base Board height} $6/7$ $r = .618$ which might be a even better number to use for the top section. if $1/7$ was removed from the top then the base of the top missing section would be $.907 / 7 = .12957$ then the new $w = 2.721$ square base for the nine section peace for the 4 bottom and 5 top will be $.12957$ thick. I have seen polyethylene pyramid molds . you will have to pour 9 clear casting resin pyramids about $3/4$ inches deep then after they have hardened file the bases until the are $.907$ inches long. Then glue to a 2.721 square peace of plexaglass aprox. $.189$ thick five and four as shown. After the four have compleatly hardened then put the 4 upside down on a flat peace of sand paper and sand until the top is missing $.189$ inches.

make two boxes $\frac{1}{2}$ inch deeper and wider than the plastic pyramid forms you have just made. Place on the bottom of the boxes $\frac{1}{4}$ inch from all sides and fill with silicone molding rubber and wait 24 hours and remove the silicone rubber. You now have a perfect reproduction of the original.

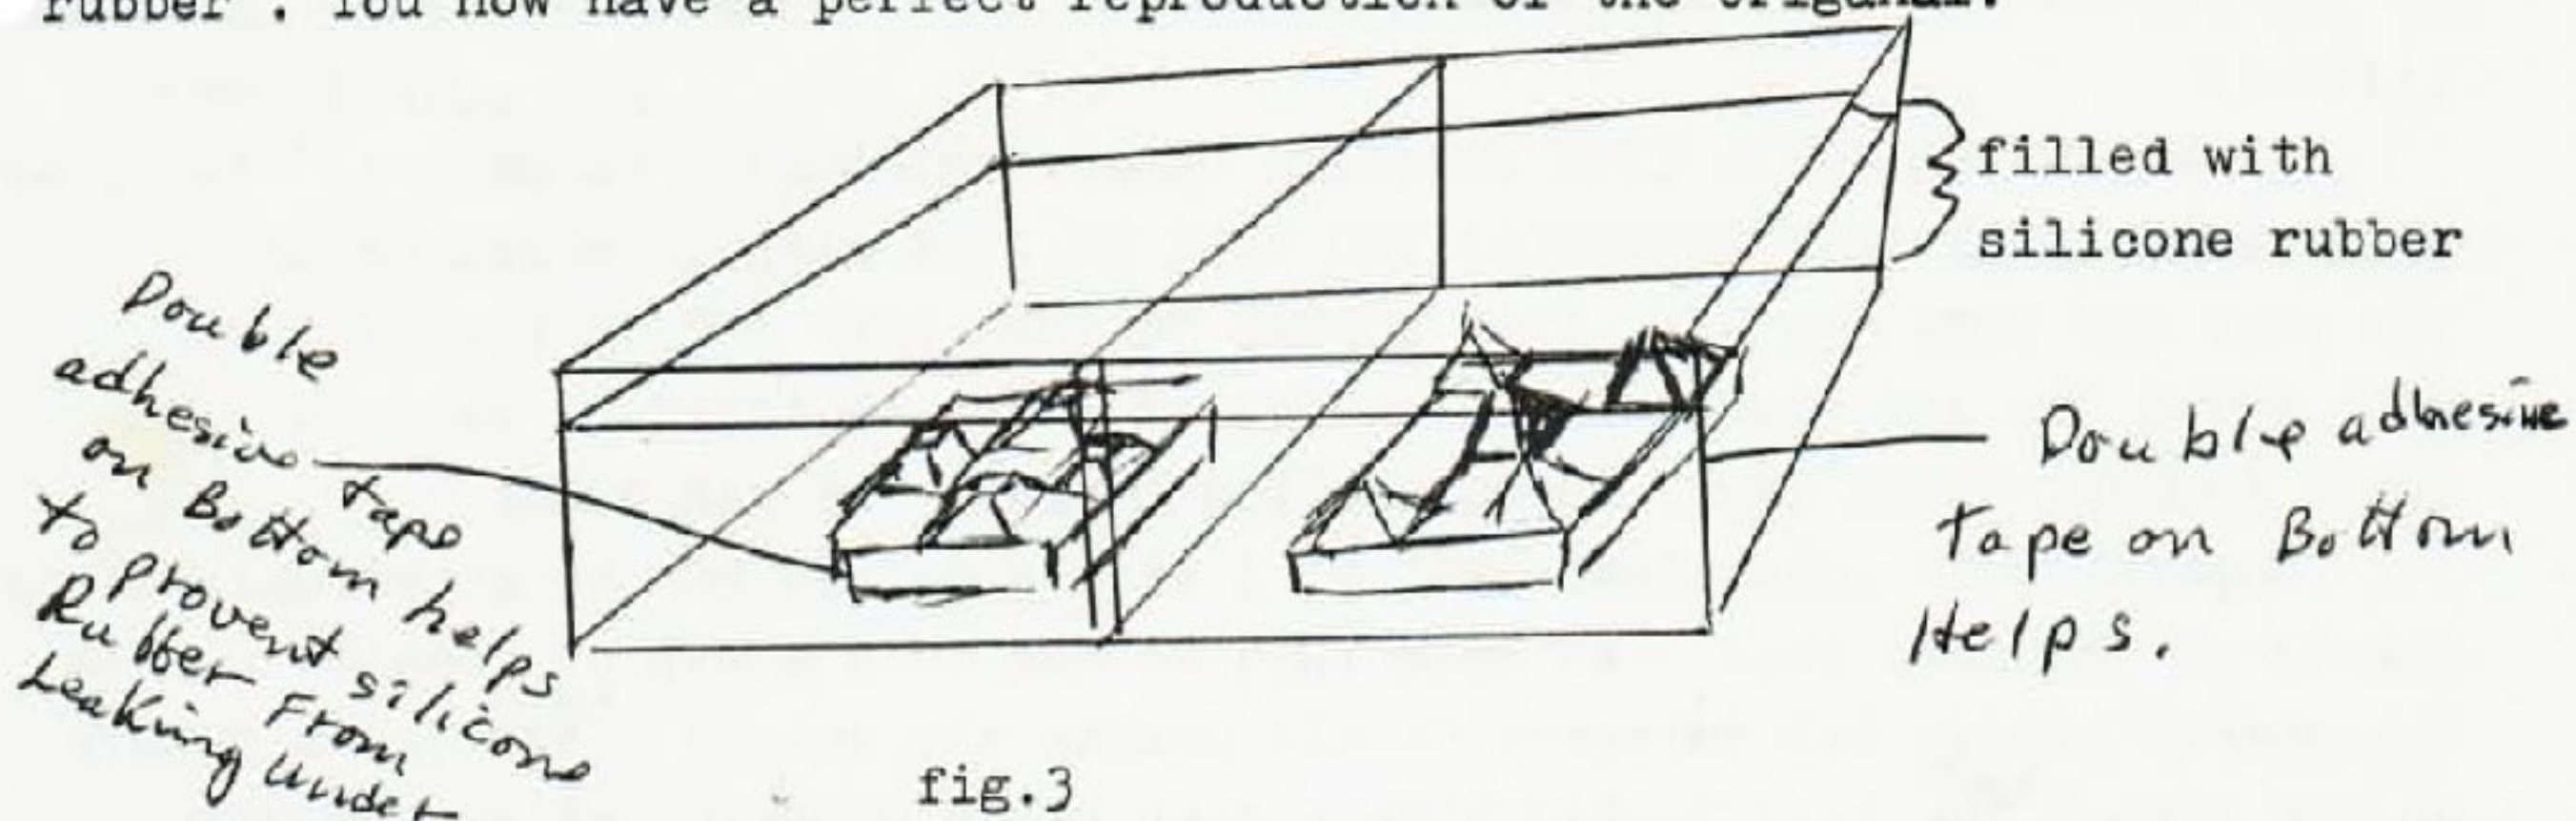

fig.3

From this mold you can make hundreds or thousands of plaster of paris originals. This is how we did it. Before we poured the plaster of paris into the molds we sprayed on the silicone rubber mold a small amount of wetting agent this help remove the bubbles. a peaceof glass waxed with Johnson paste wax with 10% 10,000 silicone ^{fluid} ~~fluid~~ added (you can by silicone spray release and spray it over the wax then rub the two togeather) Dow and general electric sell silicones.

Our formula is 95 ml pyramid, D-cell, or live quartz crystal water
1/8 cup white ^{portland} ~~portland~~ cement mix in well first

1/2 cup plaster of paris sprinkel in fast while stirring

Spray mold with $\frac{1}{2}$ teaspoon organol L per cup Water, ^{plaster} pour mixture into molds then slide over the mold the waxed siliconed peaceof glass. You may want to pound ruber mold on table before sliding glass over mold to remove bubbles. we found that 100cc syrange which we enlarged the opening on the end then squarting the mixture into the points of the molds (pyramid tops) removed all the air bubbles. Other wise top can be missing where you don't want them missing.

The following is the formula for making live quartz crystals which are used for making the quartz crystal water. WARNING DO NOT TRY TO CROSS THESE LIVE CRYSTALS WITH DOR ENERGY LIFE!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

OR CLONING !!!! THE PROCESS IS NOT EASY TO DO BUT I KNOW THAT TODAY THERE ARE SCIENTIST THAT HAVE THE ABILITY TO DO THIS!! NORMALLY THESE CRYSTALS ONLY REGENERATE LIFE AND KILL HARMEFULL BACTERIA!!! THESE LIVE RYSTALS ARE !)) 100 to 1000 time stronger in energy than D-cells. They are many time higher than the energy found in the great pyramid. We coated a 2 inch quartz crystal and buffed it into the crystal. the crystal when put near the window blue light shined on the table every one could see this

PAGE 4 you did not have to be psychic! Under a incandescent bulb the color turned to pink. REMEMBER YOU ARE NOW WORKING WITH THE REAL LIVE ALANTIS CRYSTALS IT IS TIME MAN LEARNED ABOUT THIS . LET US HOPE IT WILL BE USED FOR LIGHT LOVE AND PEACE. WHAT EVER GOD , FATE , FATHER, MOTHER, SON, DAUGHTER OF THE CHRIST YOU PRAY TO PLEASE ASK AND RE ASK BEFORE MAKING THESE CRYSTALS !!!!!!!

For over 1 hour

IF YOU WATCH THESE LIVE CRYSTALS UNDER A MICROSCOPE ~~UNDER A~~ !)) 1000 power WIDE FIELD LENSE (OIL EMERSION) YOU WILL BE IN A ALTERED STATE OF MIND FOR OVER ONE WEEK YOU WILL SEEM NORMAL TO YOUR SELF BUT TO OTHERS THEY WILL THINK YOU ARE DRUNK. DO NOT DRIVE IN A CAR AT LEAST 24 hours ... AFTER LOOKING UNDER THE ABOVE MENTIONED TIME! BE CAREFULL!

Hopefully in some other artical I will show you how to genetically alter plants on the same seed . We used this method on a group of tomatoe plants the cherry tomato had ² ~~two~~ ^{haves} on all plants the second 3 the forth tomato up the vine 5 ^{haves} the last looked like a deep ribed pumpkin. after a mounth or two all the plants returned to normal. This is a much safer direction to go in and you can eat and use the seeds from this tomato and keep the process up. PLEASE DO NOT USE THE LIVE CRYSTALS FOR THIS TYPE OF EXPERIMENT.

IF YOU DO HAPPEN TO MAKE AOME THING THAT CAN HARM YOU . THERE IS A DOCTOR THAT CAN HELP.

Go to Beechwold clinic, 4191 N High street, Columbus, Ohio 43214 and see a Dr Shearer MD. DO. ND. Homopath. earologist. etc. tel. 1-614-262-1308

Life crystal Formula

100 cc Distilled water

8 cc Kasil #1 The PQ Corp. P.O. Box 840, Valley Forge, PA 19482

.5cc lactic acid 88%

.5cc phosphoric acid 75%

tel 215-293-7200 Kasil #1 is potassium siticate liquid. they will normally give a researcers a pint sample.(500cc)

Measure above exactilly.

put the 8 cc of Kasil #1 into the 100cc water stir until desolved. Then add the .5cc lactic acid 88% then add the .5cc phosphoric acid 75%. Then pour $\frac{1}{2}$ inch into a wide mouth canning jar.

Now heat with a propane tource about 1/8 teaspoon of silica sand(white) better yet if you can get an other sample of AMORPHOUS SILICA IMSIL A-108 from IN ILLINOIS MINERALS CO. 2035 WASHINGTON AVE. CAIRO, ILLINOIS 62914 tel 618-734-4172 Heat the Silica to white hot in a stainless steel spoon then drop it on top of the $\frac{1}{2}$ inch solution in the wide mouth canning jar after the solution turn to a gel or solid. If it dose not gel use 80 or 90cc water and repeat the above formula leaving out some of the water. You shol also check the PH it should be 6.5. Sudbury soil tester for soil PH will work very well if the pH is high use add .1cc lactic acid if to low leave out .1cc

After you have sprinkled the silica on top of the gel (white hot) set the canning lid on top of the jar and place the rim over it leave it very loose. pressure cook it at maximum pressure for 2 hours (use a pressure cooker). remove and put in side a wood box painted white inside (make sure jar lid are sealed good) put two vita lite fluorsent bulbs in side ^{inside} wood box, close box up and insulate out side of box until the temperature is about 85 to 90°F, leave sealed up for 28 days then take out and put some of the quartz crystals or amorphus silica from on top of the gel under 1000 power microscope the crystals will be swimming around and growing into amebia, protoza, ect, if insects start to form destroy the solution by fill jar with chlorox leave for 2 days then ^{THROW} through out.

Dilute solution in half ^{with distilled water} close lid and shake well this is the ~~live~~ crystal solution I was talking about earlier.

A blender can be used to ^{BREAK} break up the gel better ~~when~~ add $\frac{1}{2}$ distilled water . By a new blender, keep it in your lab remember the wall of this blender can come alive you may not want this in your food. the energy for most people is way too high. This is how the alchemist made Dragons, ^{there} breath was red life energy, and can not be kill until they loose enough energy to become lizards of flesh (big lizard maybe but they can be destroyed) as Dragons I ^{DOUBT} doubt that we have the knowledge yet to remove them. This is not some kind of joke!!!!!!! THIS IS NOT A JOKE.

The living crystals don't seem to loose ^{there} energy like D-cell do over a period of time. inside the cement and plaster of paris mix they may last for hundreds of years.

This experiment has been repeated by my self several times and another person over 10 miles away he had better results.

It was also done by a class of college students and a college teacher most of the directions were not followed and it still worked. To this day the college teacher still has a ^{hard} hard time beleiving what he has done. Most of the students did not seem to be aware of what they have done.

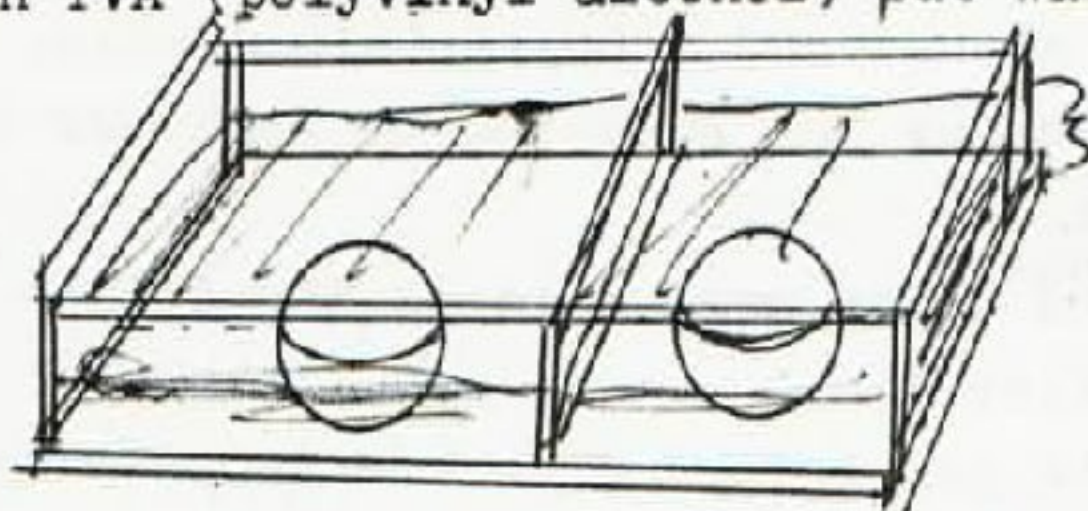

Also a company that supplies microscopes to hospitals and crime labs and repairs them and is also very knowlegable in the ^{area} of bacterology has seen and experienced the altered state. He spent 2 hours under the microscope we tried to warn him he kept saying he felt notheing but when he was finished he could not stand up.

Please buy the book The Bion Experiments on the origin of life translated for the German by Derk and Inge Jordan, Octagon books Farrar straus Giroux, New York. This is the ^{originator} originator of the above type work, Dr. wilhelm Reich.

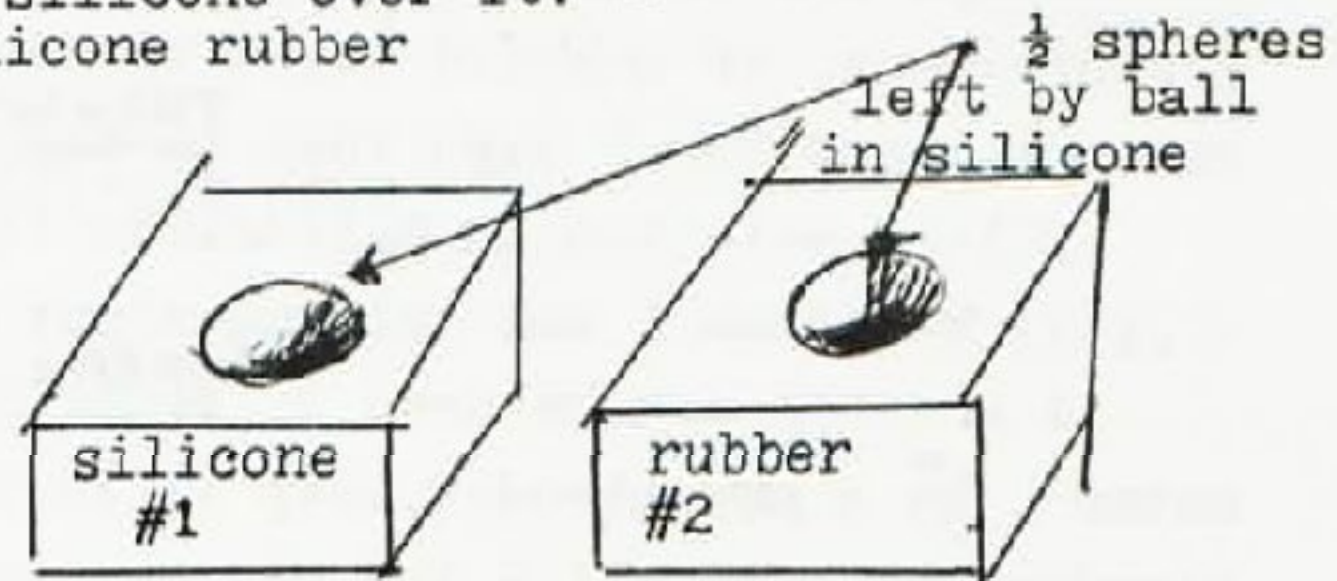

Molding rubbers: Blehm plastics, inc. 608 east 10 mile road, Hazel Park, Mich. 48030 Tel. 313-547-2211 and Dow Corning Corp, midland, Mich. 48640 Tel. 800-292-2323.

If you don't want to make the pyramid form any small plaster of paris object will work. Just use unfinished and paint the living crystals plus gel concentrate on the plaster of paris part and let it soak in.

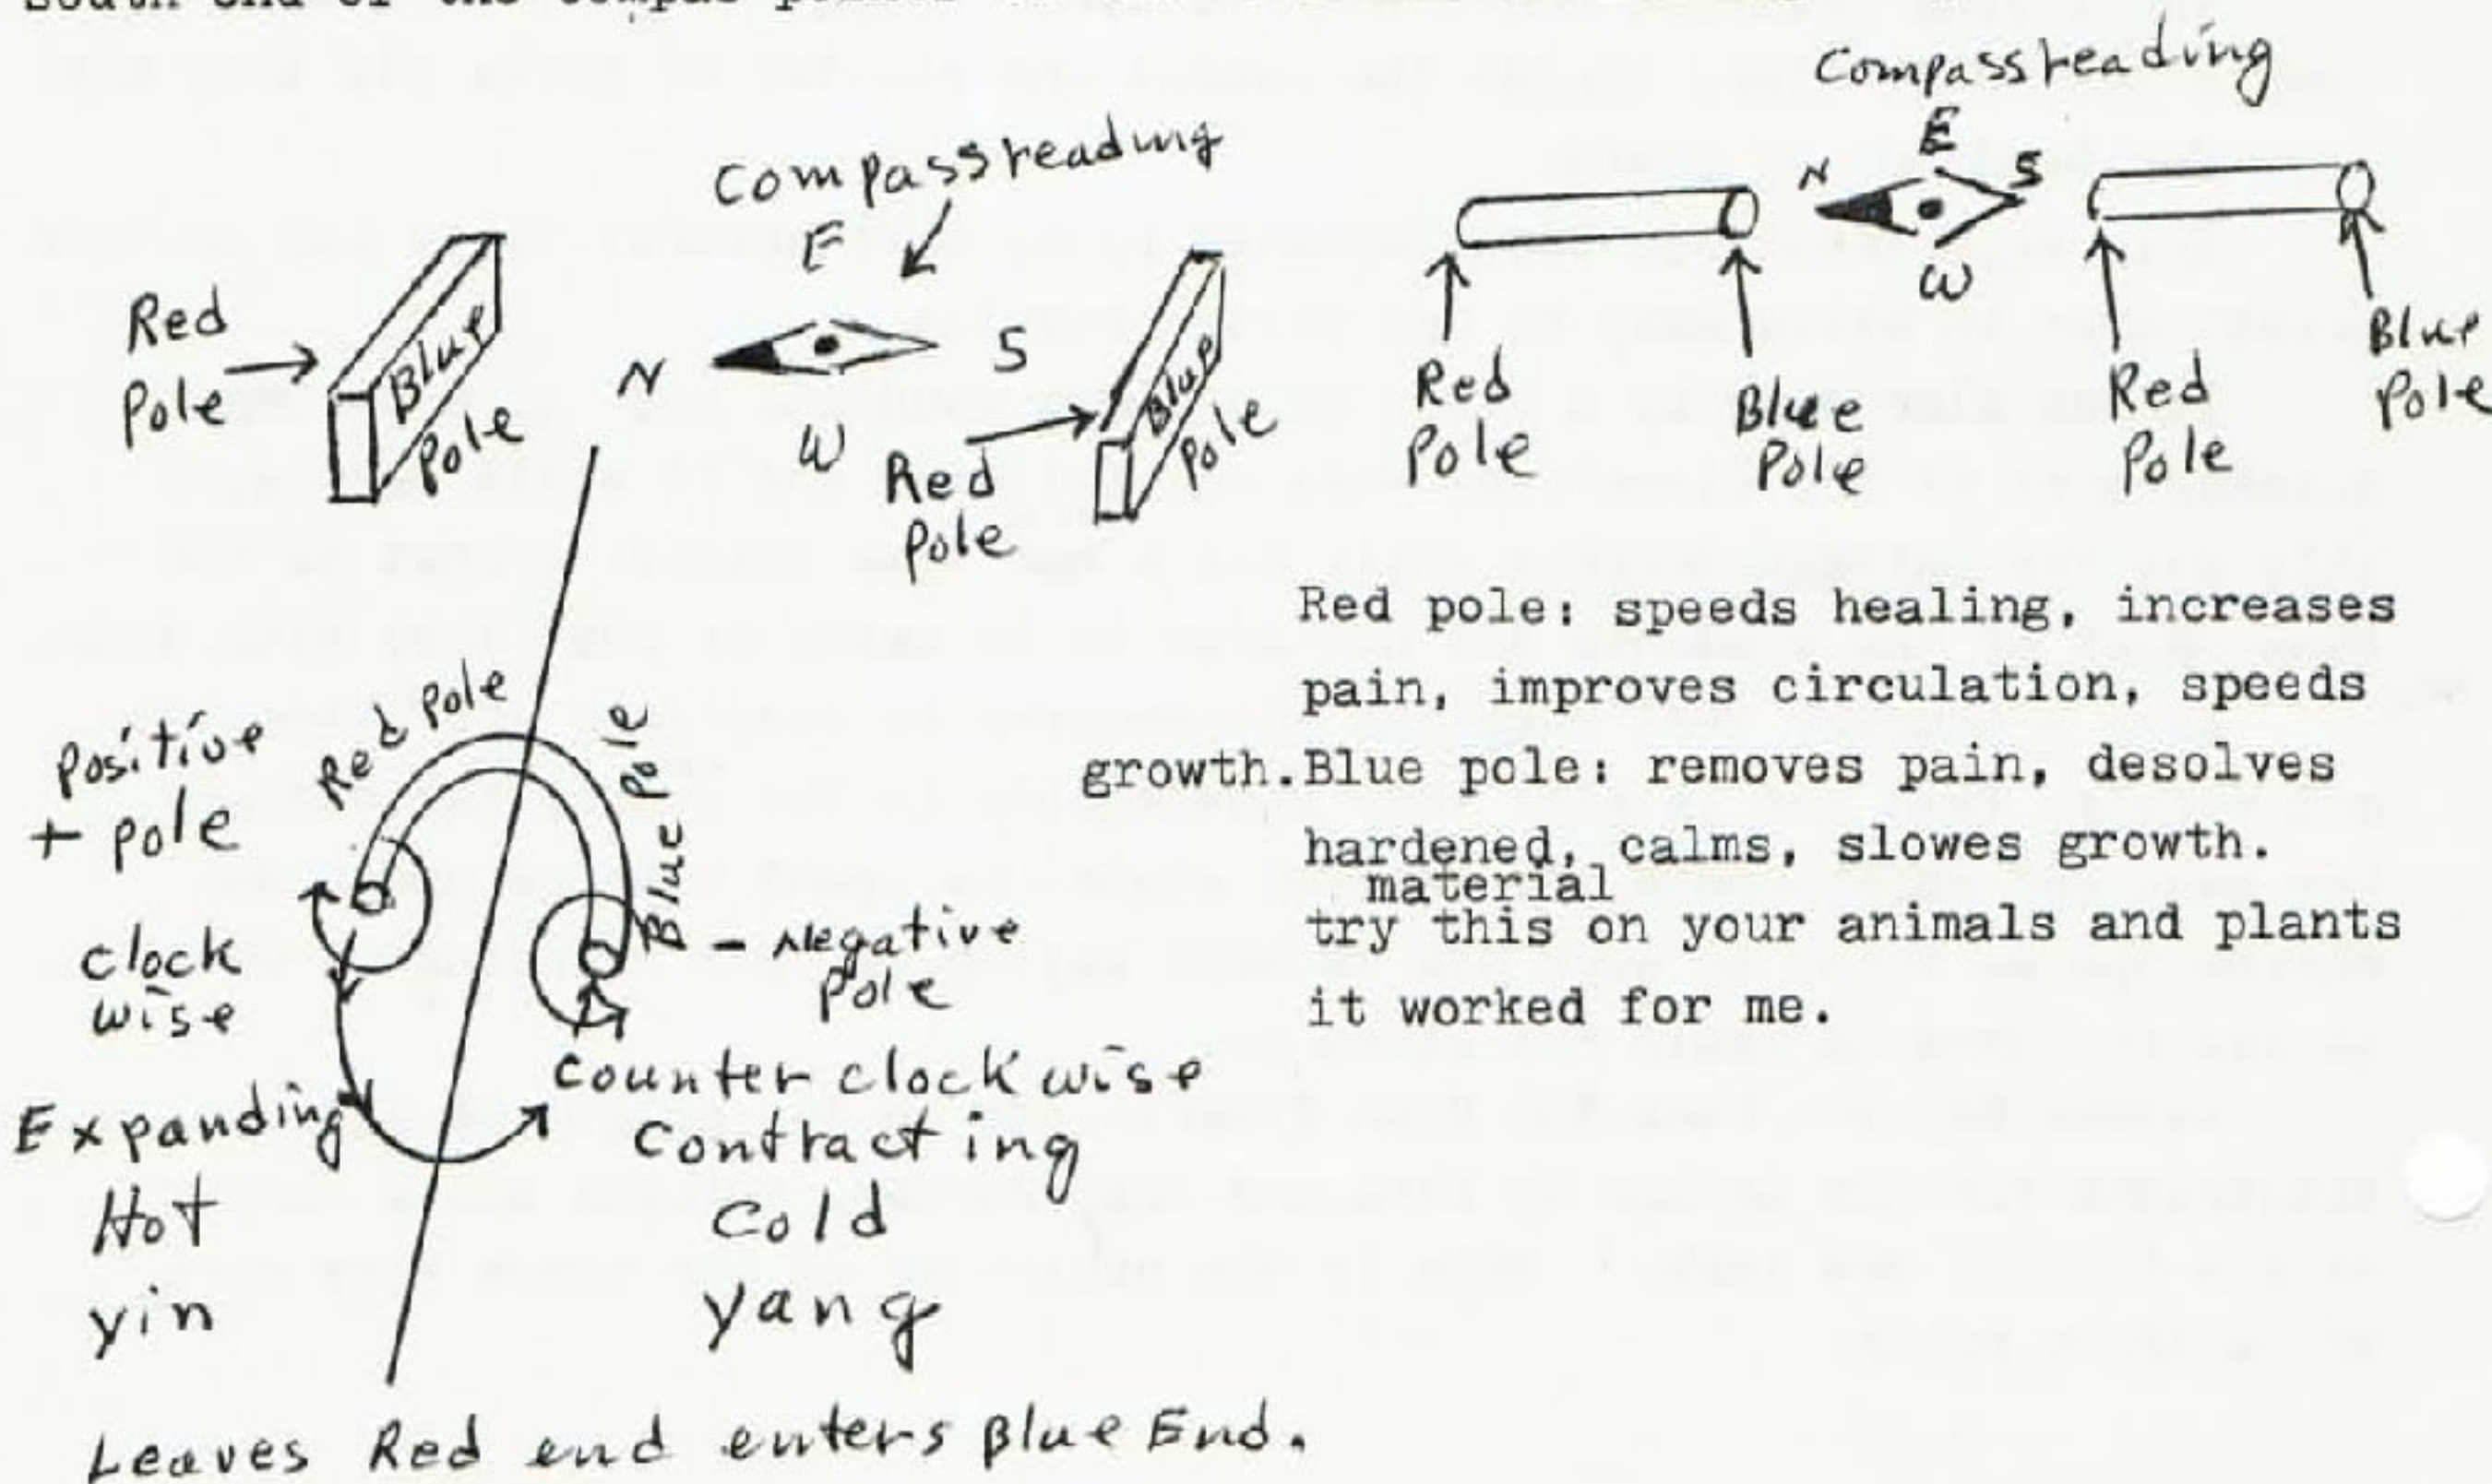

you may take a rubber ball and cut a hole in the bottom of a ^{PIECE} piece of plastic so that the ball fits half way through the hole and then coat the ball with PVA (polyvinyl alcohol) put wall around like in fig.4 then pour the

silicone over it. ←
silicone rubber

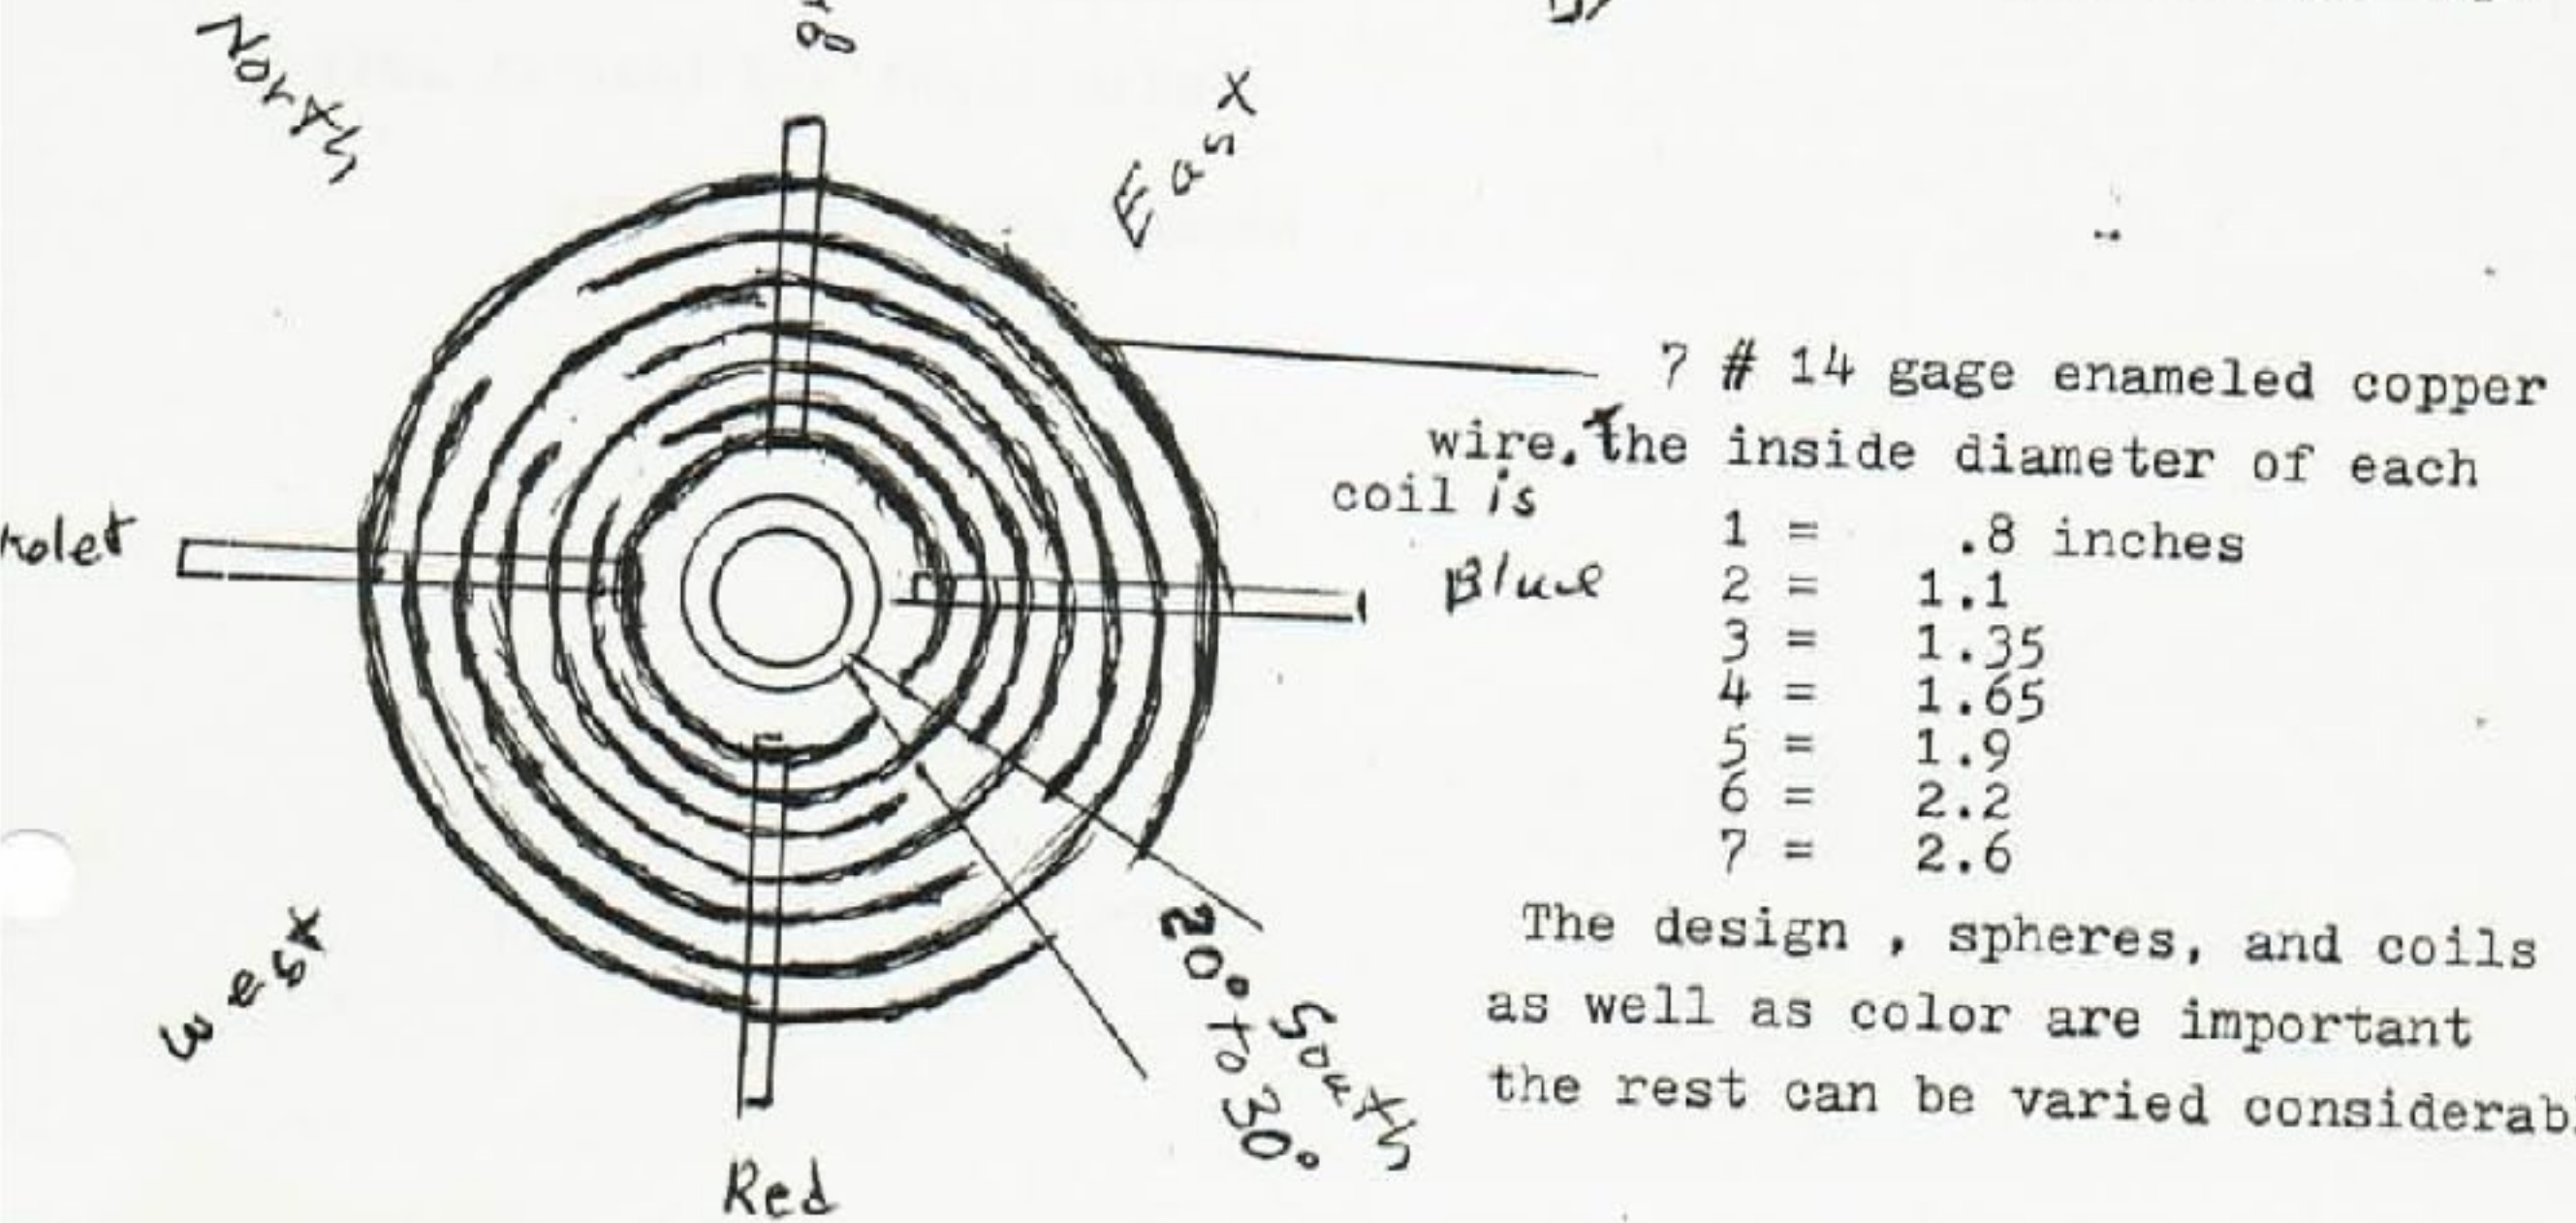

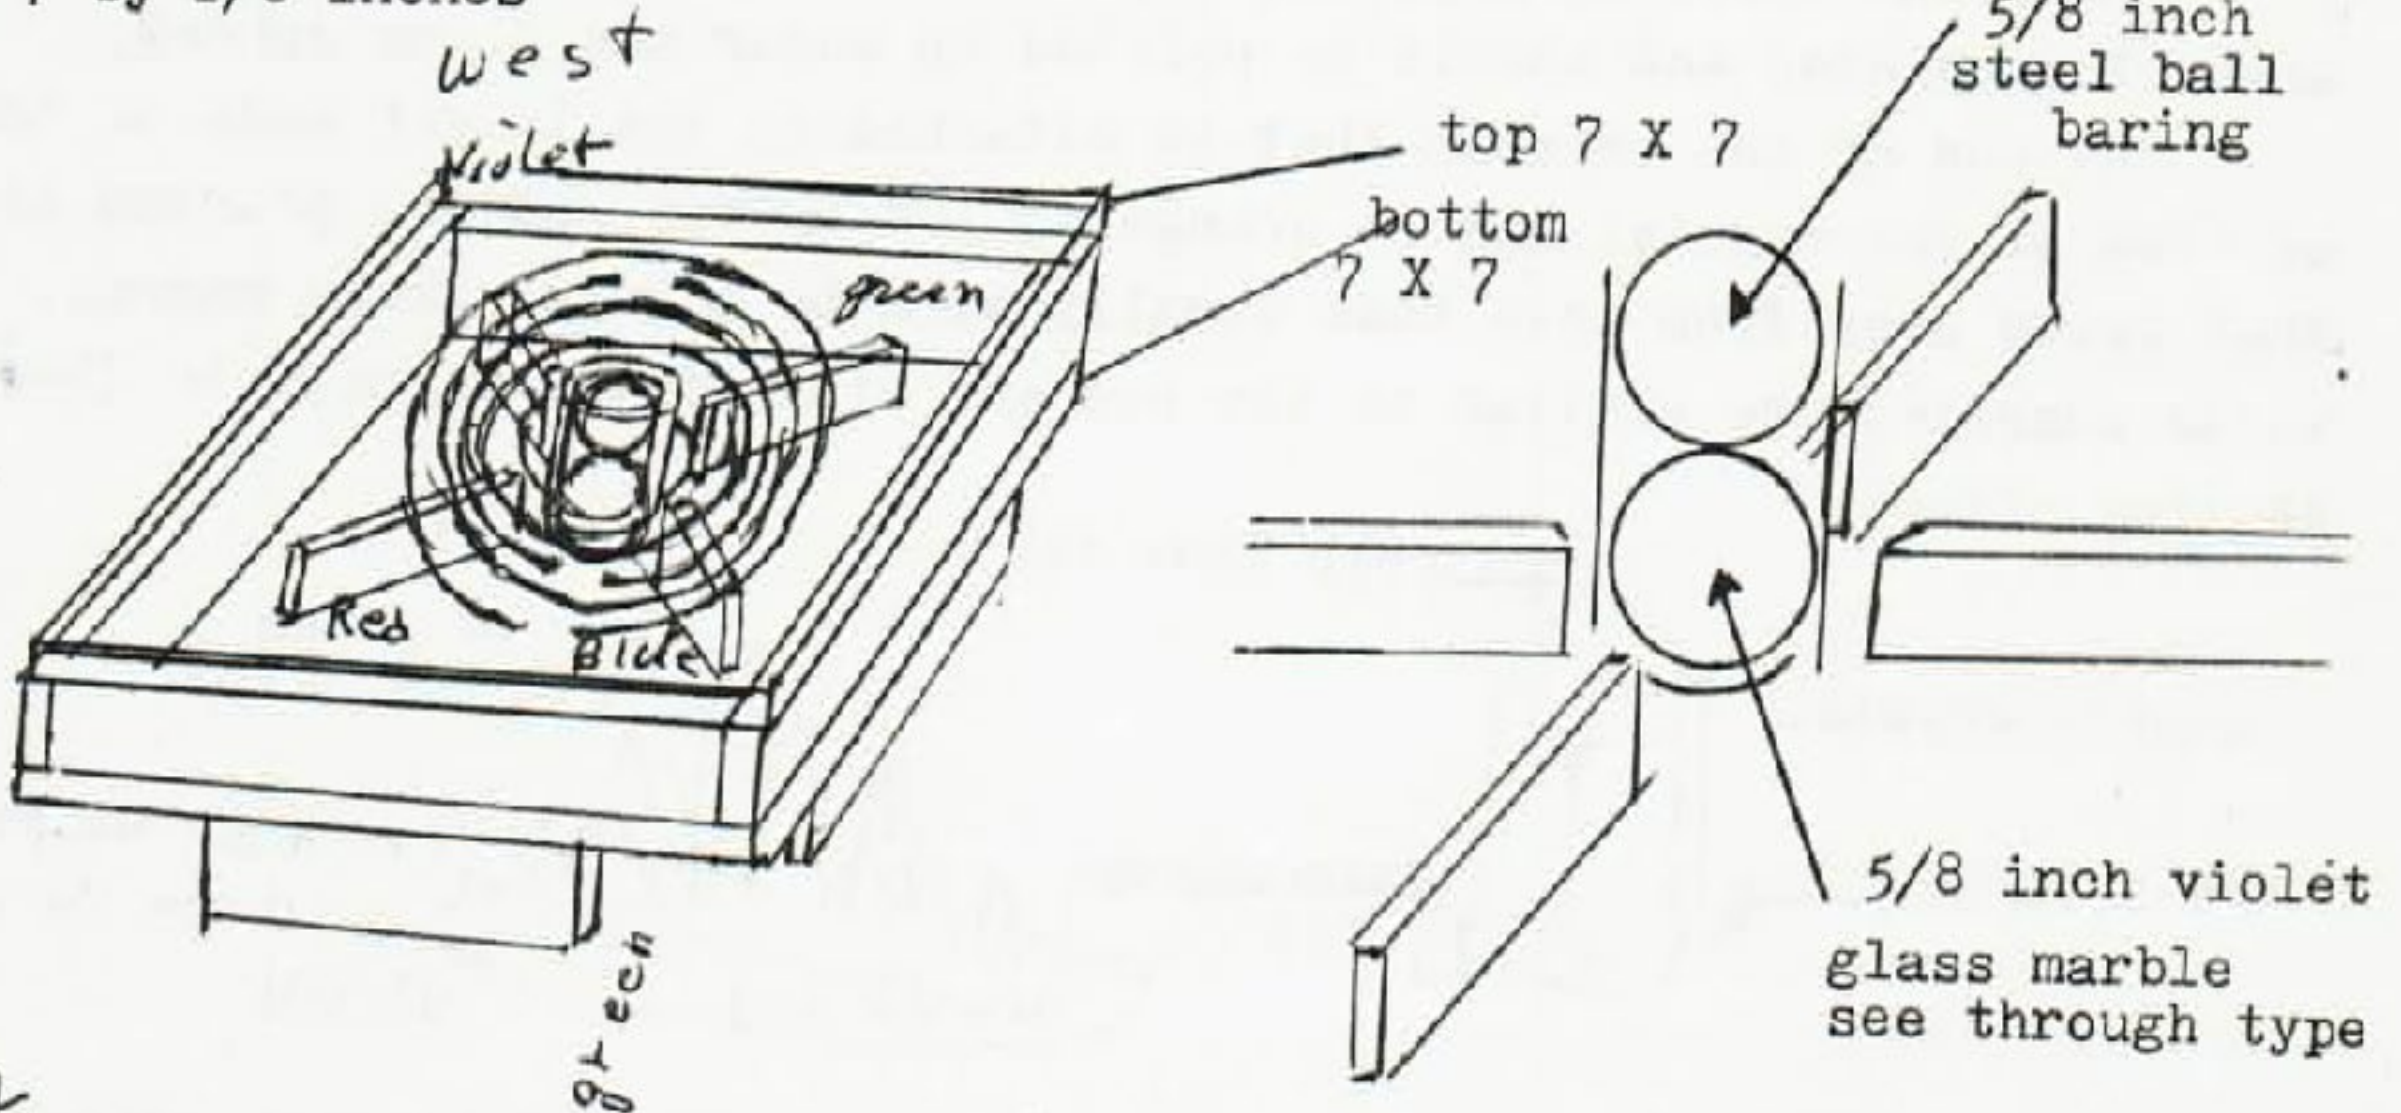

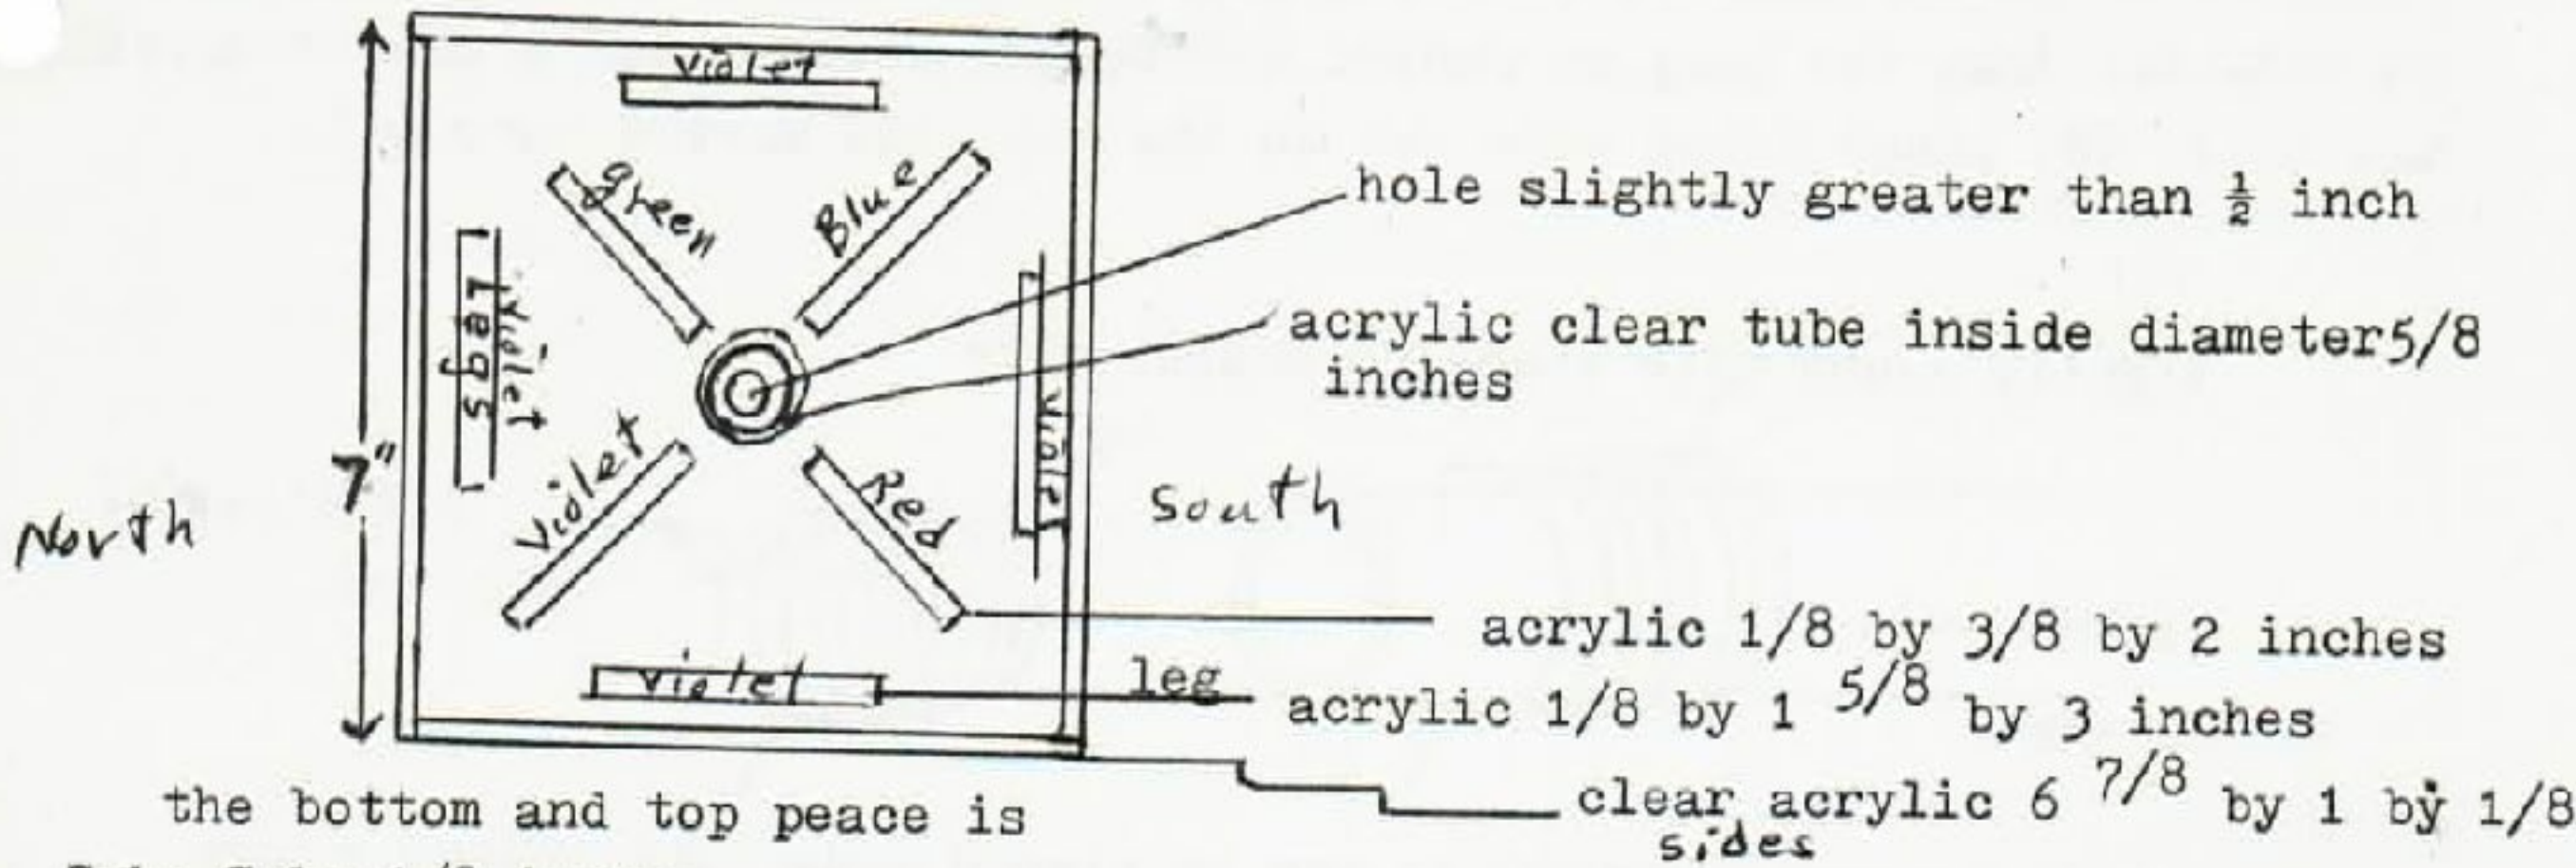

Put the red pole of a magnet under one canning jar with the living Crystals and gel in it and the blue pole of a magnet under the other, for the 28 days. In mold #1 use the plaster mix with the red water and in mold #2 use the blue crystal water. after they are hard ^{and dry} glue the red one on the bottom and the blue one on the top. Use ^{in place of} the pyramid form under the stand. The north end of the compass points to the blue pole and the south end of the compass points to the RED end of the magnet pole.

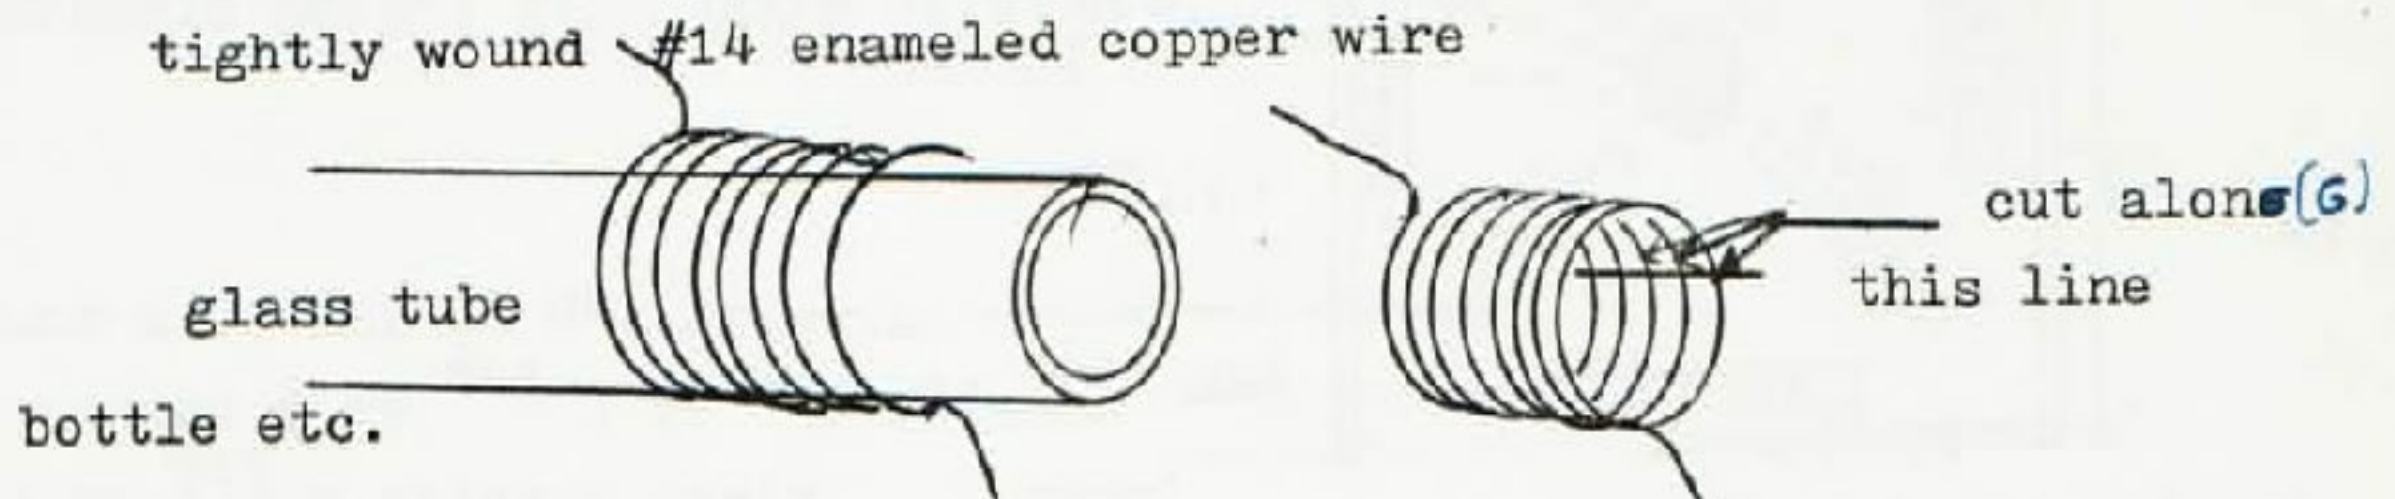

East

The bottom top and sides are made of ultra violet transmitting acrylic.

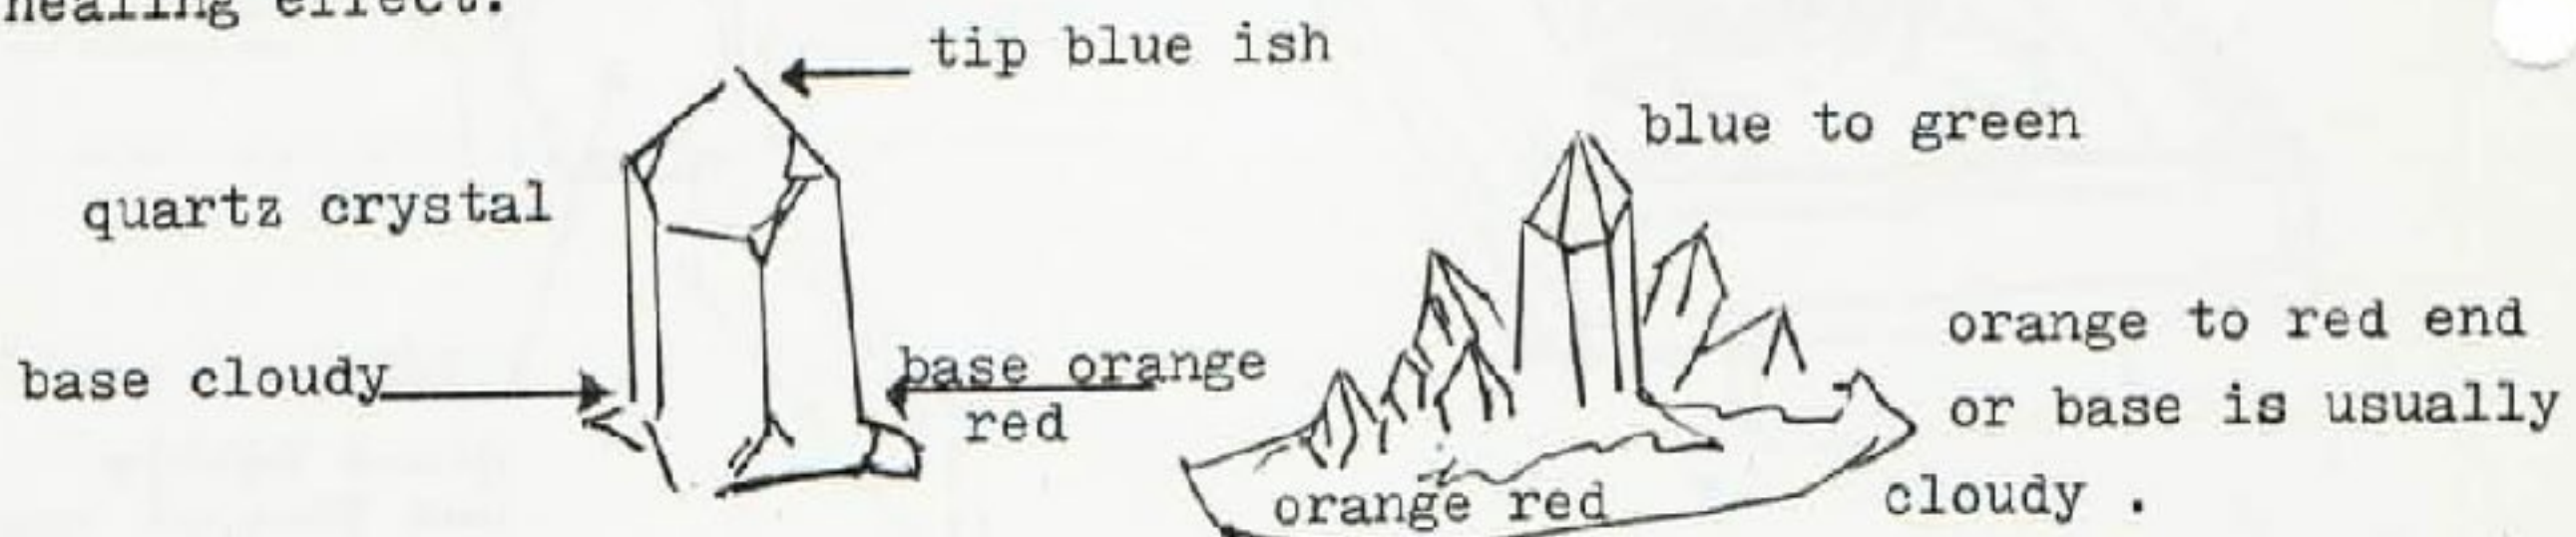

Inorder to make nice round copper loops which is important. We found round glass, plastic jars and metal or plastic tubes slightly less in dimaeter than the loop we wanted and rapped several turns then removed the coil. The inner loops were cut on the top this worked very well.

Different types of crystals may be placed under the energy stand also. The pointed end should be pointed up under the glass sphere.

The end of the crystal that is attached to the larger mass or the root or base of the crystal has a orange to red energy and the pointed tip that grows away from this base usually will be blue to green energy. These energies are similar to the red and blue of the magnets in their healing effect.

With light and love to alll

HERMAN AND SUSAN MEINKE
