Greer

I was the Senior Space Director at C-6, 20th Missile Warning Squadron, Eglin AFB, FL, from 1978-1980. I am sure you are familiar with this South Facing 32 Megawatt Radar site. It is near Freeport, FL. I can not help you with what we tracked, but I can tell you what the radar was programmed NOT to track! The discrimination files were set up such that we only tracked man-made objects of a pre-determined size, traveling at a pre-determined direction and speed at a pre-determined altitude, all "free flight". The "free flight" was a "non-maneuvering" space craft. Needless to say, if a BIG object would fly by, it would be detected, a number of hits would be taken, and if it did not meet the above program discriminations, the track would be dropped. This happened a large number of times. SR-71 aircraft would be tracked, meteorites would be tracked, and who knows what else, but if it was not "ours" (earth based) the track was dropped. I know this may not help much, but it might be one of the small pieces that helps to fit into the entire picture. When I was assigned there I felt sure that I would be able to answer my own questions about UFOs, but the programming of the radar site only heightened my ability to wonder and question the subject.

As you can tell by my E-mail address, I am still in the military. My career is about over, but not just yet. I request that you withhold use of my name and military rank at this time. I am, however, writing to my Senators and Congresswoman (per our request from the Art Bell show) using my name as a private citizen. Keep up the work...I'm sure we are not alone...
