Subject: Nuclear Accelerated Generator (NAG) / DARPA / DOD / UFO stuff.

To: [REDACTED] >

[REDACTED] have lots of stories about the UFO's and the DOD stuff way more than Dr. Greer has, he is walking a fine line with what he is doing. The problem is Steven does not know the full story about UFO's. He could wind up starting World War 3, I don't think you want that. Anna, I am way above Steven's paygrade when it comes to the DOD. The NAG project sort of pushed the UFO stuff to the for front, again a long story. [REDACTED] DARPA fought with me for more than 5 years over the NAG. The nuclear part of the nuclear magnetron has been built and tested more than once from 3th parties. I know a lot about the energy sectors, I have even talked to the oil companies, they also wanted the NAG for there oil wells in the ocean to operate the electronics. Just a fantastic story about the NAG and government patent suppression and how they do it.

[REDACTED] there is a huge organization in the government to stop people from becoming rich. I am not sure how to describe this, I know the full story of the energy sector of the government, the why's and how's they do it. Because of the fights DARPA and I had, I am the person that pushed the car companies toward electric. Again a long story on how I interfaced with GM and FORD.

Anna, I am a DOD Science Officer, Steven and I need to chat!
My home number [REDACTED] VOIP landline. I work out of my house.

Thanks

[REDACTED] he does have a valid company called Executive Engineering. The website is <http://www.exec-eng.com>. He is in Ft. Lauderdale, FL. He is about 70 years old. The company sells fuel and solar cells, aviation parts and more.

the link to a diagram of the NAG unit he is talking about along with patent numbers is:
[NAG, Nuclear Accelerated Generator Power System](#)

Atomic Battery High power DC system Nuclear Magnetron

Electronics Manufacture

I also looked up the patents which does have his name on them. I attached them if we need it. I cannot find anything about him being a DoD science officer. It shows he has a bachelor's degree from a Community College, but he did author the patents and is an inventor.
