

Hello, my name is [REDACTED] I was introduced into the legacy program in the early 1990's and worked Red Teaming missions for them for about three years. I and three others would go to locations where the program was running from and conducted security assessments that lasted about two weeks per mission. We would monitor all telecommunications and also assess the physical security of each installation. After we were done, we would debrief the leadership and staff at the location we were assessing and provide them with solutions to some of the intelligence leaks we discovered.

As a result of these missions my team and I gained a lot of inside knowledge by listening in on all of the conversations at each location. We discovered what missions ran out of which locations and gathered a lot of information about the reverse engineering projects that were shared between DOD and the private sector. We monitored many thousands of engineering, scientific, and leadership conversations on a wide variety of subjects. This provided my team with a great deal of information that most legacy program folks don't get exposure to (most folks jobs were stove-piped and little information shared).

Early on I was also asked if I wanted to be part of their retrieval team and after talking with the representative from the retrievals, I thought it sounded pretty risky and a bit morbid; thus, I didn't participate. I did hear from my friend who was on the team telling stories from time to time and it was quite interesting what he had participated in.

I am currently interested in helping to get the UAP program to a better place, but also know that there are some real road blocks and authorities that will be needed to get things to a better place. The program runs in private sector in different states and around the globe where certain labs are available for research. It is a difficult nut to crack, but some of my knowledge may help. I am ready to move on from the restrictions of my current job in order to do what I believe is the right thing to do. I don't think we will have the same opportunity as we have now to get to a better place in our lifetime. I also know that the majority of folks working in the program have no idea of some of the risky and criminal deceptions that have existed for decades and thankfully only a few folks are involved in the negative aspects of the program. So, again...the situation is going to take a balanced approach that I may be able to help navigate as the UAP investigation continues. I hope to hear from you soon!

Respectfully,
[REDACTED]
