**From:** J[REDACTED] <[REDACTED]>

**To:** [REDACTED]

**Subject:** From Japan

Hello Dr. Greer,

It is my pleasure to finally get the chance to say hello and introduce myself directly. Greg Sullivan writing here in regards to the new call for evidence.

For background sake, I will mention that about two years ago I began a CE-5 working group project here in Japan

that has turned into something much greater than first expected. I have called the project JCETI, and in the past

year met in consultation regarding CE-5s with Kosta Makreas, Jeff Becker, Deb Warren of BC, Canada as well as the Foches this past January during a visit home to the US.

The popular understanding of Disclosure within the UFO field in Japan is surprisingly behind the times, and the National Press Club video just got Japanese subtitled this spring.

In the meantime, we have the excellent translation of "Hidden Truth..." by [REDACTED] and now 'Thrive' has hit big here as well.

Last year we did over 50 CE-5s, and with the Fukushima disaster along with all volcanoes here in Kyushu

gone into active status, we have been met with great response on the side of the ETs as well.

The point of this email is to let you know about a man who is here and ready to share evidence regarding a famous crash of a fully-loaded passenger jet airline JAL Flight 123 in 1986. This case is extremely mainstream here in Japan, and the amount of things that went on behind the scenes is incredible. In short it seems there was an all out black-ops rampage with at the very least Russian, Japanese, US craft that went down in the mountains north of the Tokyo/Kanto region.

This person has collected wreckage from the site itself as well as local witness testimony to the fact that several military and top secret aircraft also went down on this day in the same location. Some of this evidence involves plasma-type burn marks in the soil that point to a possible use of an underground facility as well.

There is also photo evidence of an ARV or ETV taken from inside the doomed flight before it crashed into the mountains of Gunma prefecture north of Tokyo.

I will send a short video we shot yesterday of him describing his research and would like to know if it would be of any help to the Disclosure Project.

Also I have an acquaintance who is a 40-year veteran JAL captain (retired) who has great

interest in this work,  
and can testify to having often witnessed ET spacecraft during his flights around the world.  
Thank you for considering our suggestion for these two Japanese witnesses.  
All the best,

[redacted]
