RE: 1970 Incident at Siegelbach Depot, Federal Republic of West Germany

Dear 

The attached information regarding the 1970 incident at the Siegelbach special weapons depot is shared in hope that it may tie in with the testimony of other people who actually witnessed what I describe as one who had contact with the witnesses who actually experienced the incident.

The Siegelbach depot was the most forward of any NATO special weapons depot during the Cold War, that is, the nearest to the Warsaw Pact nations. That meant it was especially susceptible to Stepnatz (Russian special forces) attack in the event of war. Consequently, the Siegelbach Depot was on a more heightened state of alert than other similar units west of the Rhine River. Anything that threatened the depot was of special concern not only because of its mission to maintain and service war reserve tactical nuclear weapons, but also the potential loss or destruction of its nuclear weapons arsenal which represented a considerable amount of national treasure used in its creation.

 former Air Force intelligence officer associated with retrieval and disinformation activities regarding U.F.O.s, etc., commented about an incident that happened in Germany. There may have been one that occurred at Ramstein Airbase, but the thought came that perhaps he was referring to the lesser-known incident that happened in 1970 at Siegelbach.

Perhaps this limited information may be helpful in corroborating other information regarding the same place at the same time thereby providing a more complete picture. If anything, perhaps it could help others who reluctantly came forward to share their experiences after decades of compelled silence.

My Top-Secret Cryptographic security clearance became Secret, then a Confidential clearance and then no clearance at all many decades ago. My description of weapon systems and capabilities can be found easily in Google searches. However, the combination of this information in ways not previously known may be problematic. For that reason, I ask that you use discretion in its use.
