This report contains unprocessed information. Plans and/or policies should not be evolved or modified solely on the basis of this report.

1. COUNTRY: NATIONALIST CHINA

8. REPORT NUMBER: 1 818-0201 66

2. SUBJECT: Unidentified Flying Objects Over TAIWAN

9. DATE OF REPORT: 26 August 1966

10. NO. OF PAGES: 4

3. ISC NUMBER:

11. REFERENCES: DIRM Chapter 4

4. DATE OF INFORMATION: 10 July 1966

12. ORIGINATOR: U S Air Attache, Rep of China

5. PLACE AND DATE OF ACQ: Taipei; 1 Aug 66

13. PREPARED BY: DONALD W. MANSFIELD, MAJOR, USAF

6. EVALUATION: SOURCE B INFORMATION 2

14. APPROVING AUTHORITY: ROBERT G TOWER, CAPTAIN, USN
DEFENSE ATTACHE

7. SUMMARY: This report forwards a translation of a Chinese Air Force special study of Unidentified Flying Objects over TAIWAN. The study reports and analyzes seven sightings of unidentified flying objects over Taiwan and the Formosa Strait at 1800-1910 hours local time (1000-1110Z) 10 July 1966. Information contained in this study, such as times of sightings, physical location of observers, appearance of the objects and impact area of the one object that landed off the coast, should prove valuable to U.S. aerospace authorities in correlating re-entry data.

0183

TIME	LOCATION	OBSERVATION	OBSERVER
1800/18 Jul	Southeast of Kuan-hsi, Hsin-chu County	A fleeting fireball	Unknown
1900/19 Jul	Over Heng-ch'un, Ping-tung County	Unidentified bluish flying object	Unknown
1900/19 Jul	Over Ch'eng Kung Chen, Tai-tung County	Unidentified flying object	Unknown
1905/19 Jul	Over Pi-nan Hsiang, Tai-tung County	Unidentified flying object	Unknown
1908/19 Jul	10,000 Yards East of Tung-yin Island at an altitude of 1,000 feet	Landed in sea in the shape of an arc	Seen by local garrison

1909/10 Jul Control Tower, Kung-Kuan Air Base

A flashing reddish color resembling a falling rocket dropping vertically and disappeared instantly. Its position was 90-100° in relation to Kung-kuan. Distanced unknown.

Seen by Sino-American Tower Personnel

1910/10 Jul Over the city of I-lan

The edge was red while the center was green and white. It was 2 meters wide and approximately 4-5 meters long resembling a flying saucer in a very high speed fleeing from I-LAN to LO-TUNG.

Seen by LIU and YEH, two policemen from YUAN-SHAN Police Station, I-LAN branch Police Station

● TUNG-YIN ISLAND (1908L)
2422N//2030E

1. General Situation:

- a. The time of discovery was approximately several minutes after 1900 hours 10 July. The time of discovery over Hsin-chu was probably misquoted.
- b. The points of discovery spread all over Taiwan.
- c. The colors of the light objects included red; blue and white.
- d. With the exception of Tung-yin, no altitude was indicated.
- e. With the exception of I-lan and Kuan Kuang, no direction was indicated.

2. Study:

- a. On the basis of their time of discovery over a wide area:

(1) The unknown flying objects discovered over Taiwan spread between east longitude 120.1 and 121.7 (between Tung-yin and I-lan), between north latitude 22 and 26.2 (between Heng-ch'un and Tung-yin). They covered an area 460 kilometers from north to south and 160 kilometers from east to west. It is felt that there must have been a greater number spread over a wide area on the nearby sea and ocean that were not seen. On the basis of the extent of the area over which these objects were discovered, they could not have come from any weapon that had been fired from the ground. Although they fell over a wide area, their time of descent was very short. Therefore, it is felt that they had descended from a common starting point at a very high altitude. They dispersed further and further apart as they descended. They could be seen with the naked eye as greater incandescence resulted from increased friction as they approached closer and closer to the earth through heavier atmospheric density.

- b. On the basis of the colors of these unknown flying objects:

(1) The illuminated object must be made up of more than one substance. The light generated as a result of heat from friction was different due to differences in the degree of heat resistance and conductivity, and the difference in the smoothness of the surfaces of the disintegrated bodies during their descent.

(2) On the basis of the above statement, these unidentified flying objects were probably bodies-fallen satellites or second and third stage rockets that had entered orbits then disintegrated in the earth's atmosphere after they had either encountered a malfunction or had performed their ultimate mission.

3. Conclusion:

- a. There are numerous unannounced American and Russian space satellites. It is possible that some of them may disintegrate in the earth's atmosphere.
- b. On July 9, the Kung Shing Jih Pao, Hong Kong, published the following report on its second page: "Washington, July 7 (AFP) The United States announced today that the 29 ton satellite that went into orbit on Tuesday (July 5) had broken into pieces in space on the same day." Therefore, it seems possible that the unidentified flying objects discovered over Taiwan could be some of the broken pieces of the above mentioned 29 ton satellite."

COMMENT:

1. The first four sightings list the observer as unknown. The last three sightings list officials (police, military) as observers. This is probably an indirect method to indicate source reliability of qualified vs unqualified rather than known vs unknown.
2. The 1800 time of sighting at Kuan-hsi may possibly be an even one hour error made either by the observer or by the people who prepared the study. The sightings

fall into two groups; a south grouping from 1900 to 1905 and a north group from 1908 to 1910. These groupings suggest a southeast to northwest path. There are two unaccountable discrepancies; the 1800 sighting being one hour off from the other six, and the mention of a north to south flight path at the I-lan sighting.
