Administration

Capt. [REDACTED] Chief Pilot of the Japan
Air Lines (JAL) Boeing 747 cargo jet, AFFIRMED
before the U.S. Federal Aviation Administra-
tion, and the international news media...

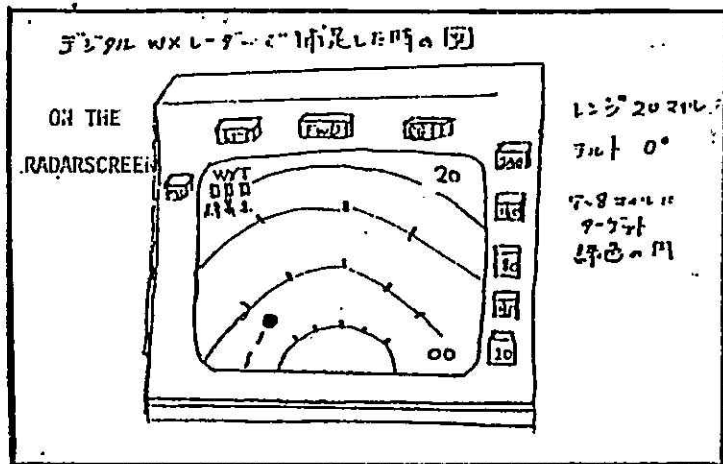

4c

DA. - 11/23
Office of Public Affairs
Alaskan Region

"It was two times bigger than an aircraft carrier..!"

[REDACTED] sketches on the object and
his radar screen for the Federal Aviation Adm.

[REDACTED] spoke to United Press International this week, describing the UFO incident
of Nov. 17 that was revealed by the FAA Monday. Additional FAA, data released Tuesday again
confirmed that government radar picked up the object.

The FAA says it cannot explain strange flashing lights that spooked the crew members of
the JAL-747 cargo plane as it flew over northern Alaska.

"We are investigation as there is nothing to investigate" - Paul Streuke, FAA spokesman
Anchorage, said Tuesday.

- He said the military has been unable or unwilling to provide any information
to explain the incident. "They're saying nothing," - [REDACTED] said.

[REDACTED] said a subsequent review of the radar tapes did not reveal any such object
but that controller insisted it was there.

[REDACTED] said radar operators in Fairbanks picked up nothing on their screen in the
vicinity of the JAL flight. And he said a United Airlines flight headed toward Fairbanks
spotted the JAL plane, but saw nothing else in the sky nearby.

[REDACTED], a pilot for 29 years, said he briefly glimpsed the large unknown object
in silhouette, and he said, "it was a very big one two times bigger than an aircraft
carrier."

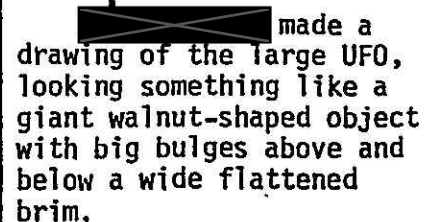

ANCHORAGE, January 4, 1987. Combined dis-
patch of the United Press International
(UPI), Associated Press (AP), and the US
Department of Transportation, Federal Avi-
ation Administration, Alaskan Region (FAA)
Releases.

(UPI) ANCHORAGE, Alaska. A veteran
pilot whose UFO sighting was confirmed on
radar screens said the thing was so enor-
mous that his Japan Airlines cargo plane
was tiny compared to the mysterious object

[REDACTED] also said there
were two other small Unidentified Objects
smaller than his cargo carrier that
did not appear on radar.

[REDACTED] his copilot and flight
engineer all told Federal Aviation Admin-
istration investigators that they saw UFO
lights.

"They were flying parallel and then
suddenly approached very close," said Mr.
[REDACTED] 47, who requested and received
FAA permission to take whatever evasive
action was necessary to avoid the UFO that
appeared for a time on FAA and Air Force
radar and on the radar screen in the cock-
pit of JAL flight 1628.

He said the three Un-identified Objects followed his jet for 400 miles.

"It was unbelievable" he said, acknowledging that some of his colleagues have doubts about what the crew

"When the UFO suddenly approached very close, we were constrained for evasive action to avoid collision," testified Capt [REDACTED] saw.

questioned the crew in Anchorage concluded they were "normal, professional, rational, (and had) no drug or alcohol involvement," the report by FAA security manager [REDACTED] said. Crew cockpit experience totals more than 46 years, the pilot said.

Mr. [REDACTED] said the crew was not frightened but wanted to avoid whatever was all lit up in their flight path: "We want to escape from this." (ep) (See sketch above) That's why they went along with FAA directives to drop 4,000 feet and make turns once appearing in front of the cockpit. Radar showed one close object.

Mr Terauchi said he could not explain the mysterious events except to speculate that he witnessed something of extraterrestrial origin of a far more advanced technology.

Speaking in English but occasionally seeking assistance from translator, Mr. Terauchi drew maps, pictures and supplied technical annotation to describe these events. (Consult with the first page.)

Asked if he was nervous, ~~XXXXXXXXXX~~ replied, "No, I am the captain, I cannot be nervous."

FAA flight control reports indicate that object stayed with JAL Flight 1628 for at least 32 minutes. [REDACTED] said he thought it was longer.

The flight controller directing the JAL plane reported the object on his radar as close as five miles to the jet.

UNCORRELATED RADAR SIGNALS

Radar data received by the FAA and used to track Japan Airlines flight 1628 on the night of the November 17, 1986, was retained by FAA. Review of this radar data by FAA experts using identical equipment at the FAA's research technical center in Atlantic City, New Jersey, revealed that the radar system was receiving what is called an "uncorrelated primary and beacon target".

Should this JUDGEMENT against the UPI SUMMARY REPORT mean that the EASTERN AIR(1948), BOAC(1954), SWISSAIR(1977), TAE(1979), VASP(1982) and the AEROFLOT(1985) classics and many endangering tactical actions of UFOs against the commercial and military aviation were also "UNCORRELATED RADAR SIGNALS...?
