

SHAPE OF DISC IS "2 INVERTED SAUCERS" - THAT'S WHERE TERM "FLYING SAUCER" STARTED - REMEMBER?

Dear Jack

6/13/02

SHARP EDGE - NOT ROUNDED ON EDGE

Enclosed please find my latest drawings per our telephone discussion. I have also included a three view drawing of a DC-6. I started by drawing the DC-6 fuselage, and then I placed that view directly over the disc. Jack, according to the specifications, the over-all length of the DC-6 is 105ft. that means that I would have to shorten the length by 51ft. in order to fit it on the disc. This would technically be the only way to fit this onto the 108ft. diameter disc you saw at MacDill. Jack, please let me know if these drawings

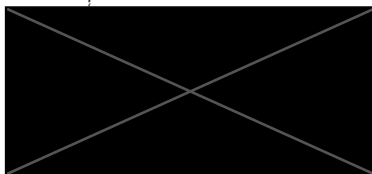

are closer, and what corrections need to be made. YOUR ILLUSTRATION OF "80 SHOOTING STAR" WOULDN'T FIT EITHER. DISC IS APPROX 3 1/2 TIMES FURTHER ACROSS THAN WINGSPAN OF EITHER P-80 AND F-86. WING IS APPROX 15' EACH SIDE OF

Thanks

COCKPIT DISC IS

APPROX 50' EACH SIDE OF COCKPIT.

Mike Schratt

I MARKED PHOTO OF 1952

TRY IT IF YOU WISH - BUT

WE ARE GETTING NO PLACE

AND I AM FRANKLY NOT VERY INTERESTED IN THIS ATTEMPT, FORGET ILLUSTRATIONS YOU'VE MADE AND

TRY NEW ONES FROM ACTUAL PHOTOS - WHERE WINGS JOIN BODY OF DC6 IS TOP OF DISC.

GOES BACK TO BOTTOM OF TAIL ON DC6 - DROP POSITION OF ELEVATORS TO REAR TOP OF DISC

FUSILAGE IS AS HIGH ON DISC AS ABOVE WINGS OF DC6 PHOTO. OBVIOUSLY FUSILAGE HAS TO TAPER BACK TO TAIL AND SLOPE DOWNWARD.

ILLUSTRATE DISC AS 2 INVERTED SAUCERS - THAT'S WHERE NAME "FLYING SAUCERS" ORIGINATED! OK?
