

When I dealt with him back when he was gleaning AFM files for gen on the Roswell event, it became apparent to me that he really did not know aircraft that well. He had no aeronautical rating at all, and I recall IDing several AF types for him, including units when known. I am not going to bother him over in Burma. I am going to wait until I contact the Canadian who is genned up on Avro Canada however. You state that [REDACTED] got the impression from [REDACTED] that these craft were put back into a "top secret" category while down in the salvage yard. If this were true, there there was no way in hell they would have stayed there and there were no transports that could carry them anywhere (smallest was how many feet in diameter?) To repeat, the USAF/DoD does not dispose of highly classified aircraft in semi-public salvage yards at bases like MacDill. If they had crashed locally and were really broken up, these pieces would probably have been places there, but that might even be doubtful.

Why did not [REDACTED] take down any names of the AF members that assisted him, or even recall them, and write them down after leaving the site? Why did he not take his own photos? If these were "unclassified," what was an "armed guard" doing there? The idea of an real LtCol or Col briefing an uncleared civilian to the extent that [REDACTED] says he was boggles the mind if that officer wanted to keep his job/retirement! I have talked to other retired AF people I know, both NCOs and officers, including a few full colonels, and like me, they have never heard the term "adjutant general" on any AFB. So this "AG library" mentioned is very suspect.

I have a roster here of Sect of the AF, and [REDACTED] is not listed. I suspect he might have been an under Sect of the AF, however, and I will be checking that out also.

As for Aviation Week, I meant that you and [REDACTED] go to back issues from 1966/67/68 and look for articles on these "Avro Canada" craft, as if the wraps had come off of them, they would have been mentioned. Same for books like AVIATION YEARBOOK, and general aviation magazines of the period. There are also many Candian aviation magazines and they also have an aviation museum up there with a research division, am sure. Have either you or Mr [REDACTED] even thought of contacting these sources, as as they are very proud of their aviation industry! The CF-105 Arrow buffs would love to assist you with this one.

To repeat, no way 32 nose wheels in tandem on any real aircraft.
