

P.S. AFTERTHOUGHT

MAIN CABIN ON 108 DISC

NOSE-DEAD CENTER

OBVIOUS 2 PILOT FRONT - LIKE THE DOUGLAS.

PROBABLY ALSO NAVIGATOR AND

WATEVER - MAIN CABIN

WIDE ENOUGH TO APPEAR SIMILAR

TO PASSENGER AIRLINERS WITH

AT LEAST ROOM FOR WALKER ISLE

AND AT LEAST 2 OR 3 SEATS EACH SIDE

IN WIDTH FOR WHATEVER HIGH TECH (?)

OR ANY OTHER EQUIP. THEY WERE DESIGNED

TO CARRY SUCH AS FOR AIR CONTROL FOR

OTHER DISCS - DETACH (WHEN LET LOOSE FROM

OTHER DISC AIRCRAFT, DRONES COULD NOT RETURN

SOME COULD BE LANDED - OTHERS NOT) COULD

BE FLOWN FROM OTHER DISCS AS AIR

CONTROL. MANY FROM BIG DISC - REMEMBER

(COVER)

I WAS BRIEFLY BRIEFED ON BOMBING CAPABILITIES. BIG ONE CARRIED SUFFICIENT FUEL TO CARRY TO EXTREME ALTITUDES AT EXTREME HIGH SPEED AND THEN LAUNCH WITH EXTREME HIGH SPEED PIN POINT ACCURACY. I THINK ALL THAT INDICATES CONSIDERABLE FUEL AND EQUIP CARRIED.

IF BOMBING MISSION SCRUBBED
(AND THEY ALL HAD NUCLEAR CAPABILITIES) FROM TARGET ON THE OTHER SIDE OF THE WORLD THEY HAD SUFFICIENT RANGE TO FLY BACK WITHOUT REFUEL ANY WHERE NEAR ANY ENEMY DEFENSE OR TERRITORY.

LATER, ^{OLD} AND THE IOC AT HUNTER ARMY AIR FIELD SAVANNAH (NOW USAF) TALKED ABOUT OUR SPACE CRAFT DELIVERING CARGO TO AND FROM THE MOON - PLANETS (AND IN HIS WORDS - ~~OTHER~~)

"WAGNER ELSE WE GO IN OUTER SPACE."

AN AIRCRAFT/SPACE VEHICLE HAS TO EXCEED 25,000 MPH TO PULL OUT OF EARTH GRAVITY. EXTRAORDINARY PLANS FOR SAME TECHNOLOGY DO EXIST. NOW !!
