

The CSETI Project: An Introduction

Center for the Study of Extraterrestrial Intelligence
Steven M. Greer, M.D., International Director

CSETI is non-profit tax-exempt research and educational organization incorporated in the state of North Carolina, with members worldwide. CSETI is funded through charitable donations and memberships and has an all-volunteer staff. Its primary goals are to:

- *Establish a real-time diplomatic and research initiative to contact extraterrestrial civilizations, leading to a sustainable, peaceful and mutually beneficial relationship;
- *Educate all sectors of human society about this subject in a credible and non-harmful manner.

The CSETI project currently has 25 Working Groups worldwide which are conducting research, and is guided by a 10-member Executive Council and an International Director, Steven M. Greer, M.D. A senior diplomatic and research team known as the Rapid Mobilization Investigative Team (RMIT) responds to areas of significant apparent extraterrestrial activity and has successfully established contact with extraterrestrial spacecraft in the United States, Mexico, England, and Belgium.

CSETI IS ADVANCING IN THREE PHASES:

Phase I

Establishing research teams and RMIT, with resulting low-level to moderate contact events.

Initiating early public education efforts on this subject.

Developing basic organizational structure and infrastructure.

Phase I has been completed (1993).

Phase II

Collecting the best available evidence on this subject, with subsequent high-level briefings to leaders in society, world governments and international leadership.

Continuing RMIT and Working Group development with increasingly significant extraterrestrial contact.

Furthering organizational development with the securing of adequate funding commensurate with the scope and significance of the CSETI project.

Conducting a public announcement on this subject after leadership briefings are completed.

Initiating worldwide public education via major media after public announcement is made.

Phase II is in progress and advancing rapidly.

Phase III

Following the heightening of world awareness on this subject, we anticipate a significant augmentation of more direct and formal contact between CSETI teams and extraterrestrial civilizations.

The successful completion of Phase II in a controlled and non-harmful fashion is essential to more open and formal contact between humans and extraterrestrial peoples.

It is anticipated that a full landing and boarding sequence will occur in this phase within the next two to five years.

The evidence that earth is being visited by at least one extraterrestrial civilization is extensive both in scope and detail. In its totality, it comprises a body of evidence which at the very least supports the general assessment that extraterrestrial life has been detected, and that a vigorous program of research and serious diplomatic initiatives is warranted.

Consider the following overview of facts:

- *There are numerous daytime and nighttime photographs and videotapes of clearly non-human spacecraft from all over the world; these films and videotapes have been evaluated and deemed authentic by competent experts.
- *There are over 3500 military and commercial aircraft pilot reports of encounters worldwide; many cases have corroborating radar documentation and multiple witnesses both on the ground and in the air.
- *There are over 4000 landings with resulting physical traces around the world.
- *There are hundreds of cases where spacecraft have been observed by police, military personnel and civilians to affect car engines, radios, and other electric devices electromagnetically.
- *There are over 100 first- and second-hand witnesses to the retrieval of an extraterrestrial spacecraft and at least four extraterrestrial bodies from a crash which occurred in July 1947, 75 miles northwest of Roswell, New Mexico. Written and videotaped testimony from several first-hand witnesses who are respected military officers has been obtained.
- *There are hundreds of credible reports, many with multiple witnesses, of humanoids in association with landed spacecraft.
- *CSETI has in the past 18 months succeeded in intentionally establishing contact with extraterrestrial spacecraft, on two occasions at very close range, and with multiple witnesses present.
- *Various polls have indicated that approximately 10% of Americans (25 million people) have seen these objects, and that about half this number (12-13 million people) have seen them at close range so that details of the structure of the object can be discerned.
- *Numerous U. S. Government documents exist which indicate that these objects are real and have been involved with observing earth for several decades.
- *The U.S. Government possesses several extraterrestrials (ETs) and the deceased bodies of several extraterrestrial biological entities (EBEs).

Recent worldwide trends of increasing extraterrestrial activity, coupled with significant advancement in CSETI research results, suggest that imminent extraterrestrial events and CSETI initiatives will soon overtake current government policy on this issue. It is recommended that governments worldwide review and change existing policy to one of increasing openness, disclosure and cooperation with civilian research teams.

Consider the following information:

- *Some UFOs are extraterrestrial spacecraft (ETS) which are piloted by extraterrestrial biological entities (EBEs) who originate on another planet, and most likely another star system.
- *More than one extraterrestrial civilization is represented in the current activities involving earth.
- *These extraterrestrial civilizations are working in concert and not competitively, although there is some specialization in function and activities for the various groups. This indicates that there exists either an emerging or well-established organization for these groups.
- *These beings have bases within this solar system and may maintain temporary bases on earth, particularly underwater and underground.
- *The variety in sizes and shapes of ETS observed is due to (a) varying civilizations of origin, and more importantly, (b) specialization of function, which include general reconnaissance, medical research, central intelligence, earth environmental research, central command and base operations, energy generation and transfer, human technology, military and space program research and reconnaissance, and initiation of planetary first contact programs.

*ETS energy and "propulsion" systems utilize principles and laws of the physical universe not yet fully appreciated by human science, and may include:

- (a) gravity/anti-gravity and electromagnetic/gravity technology;
- (b) space energy and so-called hyperdimensional energy systems;
- (c) matter-energy interchangeable technologies;
- (d) possible Consciousness Assisted Technology (CAT) and Technology Assisted Consciousness (TAC).

Sudden and fully open contact with human civilization has been avoided because of a number of interrelated factors, including:

- (a) the need to avoid an untimely disruption of earth civilization including military, political, geopolitical, cultural, economic, technological and religious upheaval;
- (b) risks to their own civilization and "people" as well as overall mission, given human xenophobia and tendencies towards violent armed reactions;
- (c) up to this time, such massive and open contact has not been necessary, and has not been consonant with their overall long-term mission and purpose.

A plan is in place to allow for gradually broader and deeper contact with human society and individuals so that humans may become accustomed to the reality of other intelligent beings in the universe, and so that needed research and observation may take place on both sides. Limited but increasing opportunities for bilateral and human initiated contact will occur in the reasonably near future.

*Sudden and large scale contact will occur only in the event of a significant worldwide emergency (man-made or natural).

*While ET observation and interaction with earth is probably an ancient as opposed to purely modern phenomenon, the marked increase in activity coinciding with World War II and the dawning of the "nuclear age" indicates that extraterrestrial entities (ETIs) are quite concerned about this transitional stage of human social evolution.

*Extraterrestrial intelligence (ETI) technology is strictly guarded by both ETI and human governmental agencies because of its potential for military applications which would greatly threaten world security. It is imperative that this technology not find significant human applications until such time as the earth attains international peace and an effective world government.

The US government, at least at the level of a highly compartmentalized top secret group, has known about the reality of these ETS and their occupants since 1947. A strict secrecy has been maintained due to:

- (a) a fear of public panic and social disruption;
- (b) security issues surrounding possible military and technological application of ETI technology, especially in the setting of a world beset with Cold War tensions and competing interests;
- (c) uncertainty and mistrust regarding ETI motives and ultimate intentions;
- (d) embarrassment and consternation over human military inability to secure world air space from repeated penetrations by ETS.

The nature of "reality" of these craft and these beings has been incorrectly characterized by some as belonging to "another dimension and reality" different from this dimension. Unfortunately, these statements are made without fully considering what "this reality" is. A more correct understanding of this is that the Full Spectrum of Reality is a singular, integrated one which may be perceived wholly or in any of its various aspects, such as perception being entirely dependent on the level of consciousness of the perceiver. The various aspects of "dimensions" of this reality, which are limitless in number, are not restricted to or by time and space as we know it commonly. These beings and their craft belong to the same Reality as humans; however, their advancement in the realms of physical science and the science of consciousness has given them competence in a broader aspect of the Full Spectrum of Reality than is usually experienced by humans.

The difference, then, is one of degree rather than fundamental reality, since humans potentially have access to all aspects of the Full Spectrum of Reality just as extraterrestrial beings do. These differences are not insurmountable, nor are they truly fundamental; in fact they are relative and only temporary. While these beings are utilizing and experiencing a broader aspect of the Full Spectrum of Reality, so too can and will humans, for we are as "inter-dimensional" by nature as they.

Some, if not all, EBEs have advanced mental capabilities which include telepathy, precognition, remote viewing and others, indicating that they have developed the "science of consciousness" to a degree which parallels or surpasses their advanced physical technologies. Humans also possess these capabilities, but these remain largely undeveloped by most humans.

EBEs are more developed or advanced than humans in a number of respects, but are not superior to humans as beings. Our point of unity and equality with EBEs is in our mutual existence as conscious, intelligent beings. While these various EBEs may have values and priorities which are different from those of some 20th century humans, their motives and ultimate intentions are non-hostile and do not include the acquisition or subjugation of the earth and its peoples.

Establishing a lasting world peace and a just and effective world government is essential to the long-term ETI-Human relationship.

THE FOUNDATIONS OF INTER-PLANETARY UNITY

by Steven M. Greer, M.D.

The time has arrived for a serious and open international dialogue regarding the possibility of future inter-planetary relations. In no other area of human experience has so much evidence existed for so long, and yet been attended by such a paucity of serious research and analysis--at least in the civilian domain. I was once asked at a conference what was the most astounding aspect of this subject, and I replied that, while the subject matter itself is extraordinary, it is the absence of a serious human response to it that is most extraordinary.

Indeed, the true barriers to the furtherance of this field of study are neither scientific nor evidential, rather they are political, psychological, social, spiritual and 'paradigmatic.' Admittedly, it takes real courage for a person, otherwise respected in his or her profession and community, to stand up and speak the truth about a subject which has been the stuff of sensational tabloid claims, crackpots, and the 'cottage industry' in the UFO subculture. The social stigma and opprobrium associated with this subject is a formidable barrier to the serious treatment it deserves. *If only a 10% probability exists that we have detected extraterrestrial life which is already visiting earth--this being one of the most profound discoveries in human history--we must find the inner fortitude to go forward.*

To the sincere person who remains skeptical, consider this:

Absolute proof is not needed before serious research begins on a subject. In no other field of human endeavor is proof required before serious study and research begins; on the contrary, proof is the result of this research. In this regard, the subject of extraterrestrial studies is being held to an irrational requirement of proof before serious research can begin, on the one hand, and denounced as an area of spurious interest because no proof exists, on the other!

This, then, is not a function of scientific reason or evidence, but is the result of a political, social and psychological reaction to a subject which causes most serious scientists to blush. Our collective temerity is driven in part by fear of the unknown, in part by fear of ridicule, and in part by faint-heartedness. The evidence, however, is so profound, the implications so vast, and the consequences of doing nothing so dire that we have reached the point where we must find the fortitude to respond to this subject in a mature and responsible way.

To any impartial observer, the evidence which exists certainly supports a greater than 10% probability that we are being visited by advanced extraterrestrial civilizations. Indeed, to most people who have seen the data in its entirety, the probability is in excess of 90%. Having spoken to several government officials who have held Top Secret clearances on this subject, and who have confirmed to me that the U.S. Government has in its possession several objects and bodies of extraterrestrial origin, my own personal assessment approaches certainty. Beyond this, I have personally been present when these spacecraft have approached the CSETI research teams within a few hundred feet, and have then signaled repeatedly to us. Frankly, there is very little doubt in my mind that we are dealing with at least one extraterrestrial civilization, and that they are non-hostile.

However, for argument's sake, let us state that all of the evidence available to us in the civilian domain constitutes only a 10% probability of contact with extraterrestrial intelligence. Does this not constitute adequate evidence to initiate a serious scientific and diplomatic mission?

Certainly in medicine a 10% probability of finding a cure for cancer would warrant an all-out effort in the cancer research community. For it is generally true that when the stakes are very high, the probability of success need not be, prior to initiating a research project. Without question, the stakes are so high in this area that even a 10% probability is adequate to mount one of the most extensive world-wide research initiatives in history.

This question is not limited to the realm of science alone. As soon as one makes the assessment, however tentative, that we are being visited by advanced extra-terrestrial life forms, the larger question of inter-planetary (and inter-species) relations becomes pre-eminent. This is, then, the ultimate diplomatic challenge. To find our common ground with intelligent life forms which are not even human may prove to be the most extraordinary task humanity has ever faced.

Witness how difficult it has been for humanity to come together in peace among the diverse peoples of the world. Notwithstanding the fact that we are all human, living on the one homeland called earth, wars, prejudices and enmity have repeatedly submerged the world into chaos and destruction. As the world moves, in fits and starts, towards a true world civilization, and the peoples of the world increasingly realize their essential unity as humans, the potential for increasingly open contact between humans and other intelligent life-forms is likely to increase exponentially.

Before we can entertain this concept, we must first ask ourselves some basic questions:

- *What global developments must occur before full open contact can take place?
- *How will communication occur, and what should be communicated?
- *Prior to full, open contact, what form of contact and communication is possible, in a pioneering or preliminary framework?
- *And most importantly, what are the fundamental points of unity between humans and other intelligent life forms in the universe? What is our universal common ground?

Regarding the last question, we cannot assume that extraterrestrial life forms who are thinking, sentient beings, and who by definition have evolved under conditions different from those on earth, are likely to be much like humans, at least superficially. Their level of intelligence, fund of knowledge, emotional nature, social and political structures, ethical, moral and religious systems--and more--are likely to be quite different from those of humans. We must therefore find a deeper point of unity, what I call our highest common denominator.

This consideration, however abstract it may seem to some, is really central to establishing a sense of common ground between intelligent species. And without common ground, we can have no relationship. I hold that this common ground is so obvious, and yet hidden, so near and yet so overlooked, that it is easily missed altogether.

Pure 'awakeness' or conscious intelligence is what every conscious, sentient being in the universe is, in its essential nature. The universal--or non-anthropocentric--aspect of human consciousness is that highest common denominator on which a sustainable relationship between diverse life forms can be based. As humans, we are conscious, awake; other higher life forms are conscious and awake. We may share very little else in common, but this universal constant is shared, by definition, by all intelligent, conscious beings, whether human or extraterrestrial. Consciousness, or universal conscious intelligence, is the first cornerstone of the foundation of inter-planetary unity.

Having realized the essential oneness which all intelligent higher life forms share, we are then faced with the practical challenge of formulating an approach to inter-planetary and inter-species relations which is peaceful, sustainable and mutually beneficial. Here are a few of the principles which appear to be essential to the successful, sustained engagement of extraterrestrial civilizations:

- *Any successful approach will incorporate a global perspective, and not one driven by nationalistic or strictly national security imperatives. The motive behind any attempt at contact and communications should clearly be globally based, and any benefits resulting from contact must benefit all the peoples of the world, and not just one nation or culture. The evolution of the world into a true global civilization will certainly facilitate this type of relationship. This entire matter, then, should be the focus of the international community. *One of the hallmarks of the maturation of the human race is the attainment of a true world civilization and the establishing of a just and representative world government, which would be empowered to respond to the challenge of inter-planetary relations.* Until such a body is effectively functioning, any group attempting such contact should be operating within this global perspective.
- *While the precise motives for current extraterrestrial involvement with this planet may not be fully known, there is no evidence that they are motivated by any net hostile intentions. Until proven otherwise, therefore, it should be assumed that any such visitors are non-hostile and approachable.
- *The attainment of a healthy and appropriate collective self-esteem for humans is essential for an appropriate relationship to evolve between humans and any other extraterrestrial species. Individuals and organizations involved with inter-planetary contact should avoid the common tendency to swing between viewing advanced technological beings as intrinsically superior or inferior. It is more sustainable to view such variations as simply differences which are the product of diverse evolutionary paths, and that on the level of conscious intelligence, all sentient beings are essentially equal. Here, equality does not require sameness.
- *It should be realized that until the world achieves the level of maturity described above, that any direct contact and relationship which develops may be limited, preliminary and by nature pioneering. Given recent CSETI successes in this regard, we can make the initial assessment that such contact is likely, and will progress as the world becomes increasingly a genuine global civilization.

*The knowledge of any contact and evolving relationship should be shared with all the peoples of the world to the fullest extent possible, and in a timely fashion. Secret or covert contact should be viewed as intrinsically dysfunctional and should be avoided to the fullest extent possible.

*A multi-disciplinary and multi-cultural approach to any contact, relationship, or exchange should be used. Communication itself may proceed verbally, electronically, 'symbolically/archetypically,' or even telepathically.

*A very broad view must be maintained in evaluating the manifestations of an advanced extraterrestrial civilization, since their technological development may be thousands to hundreds of thousands--and conceivably millions--of years more advanced than earth's. The manifestations of such an advanced technology may appear magical to humans, even as a hologram, TV, or laser would appear magical to people of the 17th century. The tendency to pronounce such manifestations as 'supernatural' or magical should be avoided.

Are we alone in the universe, and have other intelligent life forms found their way to our small part of the galaxy? The best available evidence suggests that, no, we are not alone, and yes, they have already found us. The real question at this point may be 'what are we going to do about it?' We must come together to search for answers to this and even more difficult questions, for nothing less than the future of planet earth may hang in the balance. If we are wrong, and all of the existing evidence points to some other phenomenon it may prove extremely enlightening. But if we are correct in our assessment, and we are being visited by advanced extraterrestrial civilizations, then the risks of doing nothing are immense, and the benefits of acting wisely will change the world as we know it.

IN EITHER CASE, THE TIME HAS COME TO ACT.

THE IMPERATIVE OF CONSCIOUSNESS

When we speak of interacting with ETI, we are, after all, talking about reaching out to advanced conscious intelligent beings, and not the mere observation of some natural phenomenon or biological process. For this reason, careful consideration must be given to not only our view of ETI's intentions, but more importantly, to our own intentions and attitudes. The human tendency--well evidenced by both military and civilian reactions to ETS--for xenophobic, violent and even paranoid reactions to the new or unknown must be addressed and rectified. The human predisposition to view anything which we do not understand or control as intrinsically hostile and threatening must be overcome. The blind quest for personal gain, profiteering and an inclination towards viewing ETS/ETI in a predominantly "acquisition" framework need to be altered. If we are motivated by a desire to "outsmart" ETI and acquire their technology and energy source, then our efforts will fail. If we approach ETI with greed, fear, assumed hostility and suspicion, then we shall expend our efforts in vain. There is no doubt that we are dealing with beings who are capable of reading, by both telepathic and conventional means, our true intentions and motivations, and who can sense the "spirit of our endeavor." Success requires that the spirit of our endeavor be one of scientific openness, the search for truth, altruism, selflessness, harmlessness and non-covetousness. A desire for the peaceful furtherance of the ETI-Human relationship is paramount. For these reasons, "purity of motive" on the part of human researchers and investigators is a primary prerequisite, while specific skills, expertise, and technology are important but secondary considerations. The breadth and clarity of our consciousness is imperative and transcends all other considerations. Our obsession with technology and outward things tends to obscure the Big Picture of the ETI-Human relationship, and all that it entails. While competence and knowledge cannot be slighted, we must insist on the primary importance of consciousness. In this regard, it is likely that a novice possessed of noble intentions and equipped with only a flashlight would meet (has met?) with greater success than a governmental agency motivated by lesser intentions, even though it has advanced technology, personnel and billions of dollars at its disposal. Indeed, an aboriginal with only a bonfire may go further in the establishment of communication and the discovery of truth!

CSETI RESEARCH RESULTS SUMMARY

Mexico January 30, 1993:

On January 30, 1993, the RMIT was activated and sent to the volcanic zone outside of Mexico City, Mexico. Just before 12:30 a.m., local time, on January 31, 1993, while engaging in CSETI protocols to vector extraterrestrial spacecraft into the site, the entire team was briefly engulfed in a beam of amber light, which originated in the northwest sky. No conventional source for this beam was found. Later, on February 1, 1993, the team was able to vector into the site a large triangular craft, measuring 300-800 feet in diameter (one to three football field lengths). This craft responded to the team's signals, circled the area, and descended with its leading edge fully illuminated in what appeared to be a landing attempt. This triangular craft was approximately 300 feet in elevation and under 5000 feet from the research site. It had a brilliant light at each corner of the triangle, and a red pulsating light in the center. It was accompanied by a small red-orange probe or scout craft. As the craft left the area, it repeatedly returned signals from the team, and then dipped below a ridge and was not seen again that night. This contact lasted about ten minutes. On February 2, 1993, the same type craft returned, this time under 200 feet, and again signaled in an interactive manner with the team. During the last 24 hours the team was in Mexico, it encountered during daylight hours brilliant, shiny metallic discs which hovered or flew near the team members. Four such discs on four separate occasions were encountered by the team on February 3 and 4, 1993.

England July 27, 1992:

At approximately 12:20 a.m. on July 27, 1992, on an 1800 acre farm near Alton Barnes, Wiltshire, England, the CSETI RMIT was successful in vectoring into the site a large, brilliantly lit, disc-shaped, domed craft, measuring 80-150 in diameter. This craft was silent, and less than 400 yards away, and came within 10-30 feet of the ground. It was, in fact, in the same wheat field in which the RMIT was located. This craft signaled repeatedly to the group of four researches, and a small amber object at one point detached from the craft and went up into the clouds. While at close proximity, this craft caused magnetic disturbances to the compass so that the needle rotated counterclockwise 360 degrees around the compass dial. This near-landing event concluded with the craft receding to the mist and out of visible range after 10-15 minutes of signaling the team.

Florida March 14, 1992:

On March 14, 1992, at 8:24 p.m., CST, on a beach near Pensacola, Florida, over 40 people present for a CSETI research team training exercise were able to vector into the area four silent, hovering craft, which signaled repeatedly to the group, and changed formation in response to the group's light signaling. This event was observed from six locations, and videotapes and photographic evidence were obtained. These objects were under intelligent control and moved towards the group while exchanging light signaling with the team. This event lasted for 10-15 minutes.

Belgium February 5, 1992:

Having learned of a significant UFO wave in Belgium, the CSETI RMIT, consisting of four people, departed for Brussels on February 5, 1992. On the night of February 9-10, the team conducted research under unfavorable weather conditions near the town of Eupan, Belgium. At 12:30 a.m. on the 10th the team saw at low elevation four objects approximately 300 feet away, brightly lit, which vanished suddenly after about five minutes of observation. The team returned the next morning to the site, and no explanation for the objects was found.

On the night of February 10, 1992, the team proceeded to a high ridge near Henri-Chapelle, and at 12:45 a.m. on the 11th successfully vectored into the site a large triangular, silent craft which dipped below the low cloud cover to reveal a brilliantly lit apex of the triangle. The light on this part of the craft was about the size of a full moon. A few minutes later, the team heard a low vibratory rumbling directly above them, which seemed to be turned on and off in rapid succession twice. This vibration was above the team in the clouds and was stationary.

HOW YOU CAN ASSIST

The scope of what we are attempting is immense. Financial support is essential to the success of our projects. Membership or a contribution of any amount will help.

The "Best Available Evidence" project is currently seeking the most recent verifiable evidence of ETI encounters on the planet. This information will be used in the presentations to world leaders. Encounters verifiable by multiple witnesses, multiple video or still photography images, physical evidence, etc. are needed.

Members with high level contacts in government or the private sector, either in the United States or abroad will be essential to the rapid networking and dissemination of data as Phase II progresses. Some of the people you know may be helpful in the collection and distribution of information.

Member media contacts in print and/or broadcast networks will be needed. Regional information centers will be established around the world to assist in collecting and processing information and answering questions which will result from formal public announcement.

Funding for "Rapid Mobilization Investigative Team" (RMIT) field research is essential. The ongoing successes with recent human initiated contacts (CE5's) must continue.

We need people to help execute these goals. Do you have any other skills, contacts or information which might be helpful to the CSETI mission? We can make it happen. Contact us please. We need your help!
