Steve --

I only just found the time to read your National Security Implications paper that Emily had forwarded to me. I thought it was quite a well written and compelling piece of work. Certainly very much better than any thing else on the subject that I have encountered. I will distribute it to people I think might find it useful.

By the way, the correct term (as engineers and military professionals will tell you) is reverse engineering, not back engineering.

Hope you're well. Got the announcement of your conference in early November. May try to make it down if I can.
