

Proposal For Research

DEVELOPING A GLOBAL POSITIONING FOR
CSETV/PROJECT STARLIGHT COALITION'S
ANNOUNCEMENT ABOUT UFO/EXTRATERRESTRIAL INFORMATION

September 18, 1995

METHODOLOGY

Overview

The Center for the Study of Extraterrestrial Intelligence (CSETI) is a non-profit tax-exempt research and educational organization incorporated in the state of North Carolina with members worldwide. CSETI is funded through charitable donations and memberships and has an all volunteer staff headed by International Director, Steven M. Greer, M.D.

CSETI's primary goals are to

- establish a real-time diplomatic and research initiative to contact extraterrestrial civilizations, leading to a sustainable, peaceful and mutually beneficial relationship; and
- educate all sectors of human society about this subject in a credible and non-harmful manner.

Joining CSETI in its effort in effecting a non-harmful disclosure on the UFO/ETI issue in the near future is The Project Starlight Coalition (PSC), a voluntary association of researchers, scientists, world leaders and concerned citizens. Since its inception in July 1993, the PSC has developed a strategy to coordinate a high level disclosure on the UFO/ETI subject, and has successfully been able to brief numerous world leaders. They have found that wide consensus exists among senior political, scientific and military/intelligence figures for a public acknowledgement of the reality of UFOs/ETI.

Together, CSETI and PSC envision the process of disclosure to go forward in four phases

- I. Collection of evidence and the testimony of senior government, military and intelligence witnesses on the UFO/ETI subject, development of strategy, building networks and early pre-briefing of senior world leaders.
- II. Upon finalization of evidence and witness testimony collection, the formal briefing process will begin. The briefing process, to begin just prior to a public disclosure, will be geared towards the world's senior government, scientific, cultural and religious leaders and organizations.
- III. The Public Announcement will include an event covered by the world's media where the best evidence (high quality, multiply witnessed UFO/ETI cases, official documents, photos, video, movies, biological samples) and witnesses will be presented publicly, making an undeniable case for the reality of UFOs/ETI.
- IV. The Post Announcement Era: As follow-up to the announcement concerning the detection of ETI, a continuing effort of public education, conferences and in-depth

INTRODUCTION TO THE PROPOSAL

This proposal contains The Wirthlin Group's recommendations for research to support a global positioning and communications project for The Center for the Study of Extraterrestrial Intelligence (CSETI) pertaining to the joint CSETI/Project Starlight Coalition (PSC) announcement of extraterrestrial activity on Earth. The primary purpose of the research is to address CSETI/PSC's need to communicate information about the existence of extraterrestrials on earth, to the general public and government and business leaders, within the United States and around the world.

Organization

This proposal is meant to be a working document. It includes discussion of why this project is being undertaken, how it will be implemented, and how the results can be used in support of a multi-faceted strategic communications plan. To help understand how the pieces fit together, the following outline summarizes the key points of each section of this proposal:

- **Methodology:** This section provides an overview of our approach to positioning research, identifies the information objectives for the study, and recommends fieldwork markets and respondents. It concludes with a summary of the research approach and details on design, implementation, and analysis.
- **Ability To Perform Work:** This section provides an overview of The Wirthlin Group's unique corporate capabilities. This section also introduces the research team proposed for the research.
- **Project Budget:** This section outlines the investment required for the project.

briefings will occur. This continued educational program is to ensure a calm, orderly, and ultimately constructive assimilation of the knowledge that we are not alone in the universe, and to empower the world community to assume open responsibility for management of the subject, thus ending current exclusive covert control.

Many of the tasks in Phase I and II have been completed. CSETI and PSC are now looking for assistance for Phase III. CSETI's decision to select an outside resource to strategically, tactically, and creatively provide the expertise needed in guiding CSETI/PSC through the global positioning process of disclosing information about UFOs/ETI indicates that CSETI/PSC is developing a well thought-out communications strategy that helps to build recognition and positive associations with their organizations and the UFO/ETI issue. This global positioning research project supports the communications strategy development process. We use the military analogy that an army depends on good intelligence. As in the military, the information to be generated by this research project should serve several purposes:

- It should provide guidelines for strategic positioning.
- It should provide more tactical information on specific situations, issues and geographies which may require special attention.
- It should be replicable so that it can help CSETI gauge progress in the future so that the program can be modified as priorities dictate.
- It should provide information which would be used to counter expected disinformation communications campaigns by opposing organizations.

The Wirthlin Group has developed a conceptual framework for approaching such an image assessment effort, as is articulated below.

Managing Image

Whether or not a company or an association actively manages it, virtually all organizations have an image. This image is not formed solely from a set of hard attributes conveyed directly by the organization. For example, Eastern Europeans, Asians, and Africans who have limited access to Western market goods have been found to recognize and have conceptual images of the icons of Western consumer culture. Coke, Disney, McDonald's, etc. In the U.S., consumers stopped on the street and asked "If (name of company) were an animal, what would it be?" very frequently make associations with companies that reveal underlying images that might or might not relate to that which the companies themselves try to project (Procter & Gamble - gorilla; Johnson & Johnson - teddy bear, etc.) Often companies are assigned the image of their industry, or they inherit an image by default. But image can and should be managed.

We summarize positioning/image and how it ought to be applied with the following statements:

- A product/company/issue's image is the set of ideas and impressions, both rational and emotional, that major stakeholders form about the product/company/issue.
- A product/company/issue's image is its personality, or persona.
- A "product/company/issue's personality" derived from the image should constitute the essence of a communications strategy, and provide the framework for all communications – whether on the overall level or for specific products/services/comments offered by its individual units.

Understanding Current Image

By gaining a thorough understanding of key audiences' perceptions of "who" CSETI/PSC is and where they stand on the UFO/ETI issue, the association can leverage its strengths and identify where expectations are not being met in order to correct perceptions. Also, by understanding the competition's (government/international cover-up/business profiting by the historical cover-up) strengths and weaknesses, CSETI/PSC can determine how to position itself/its position on the issue versus the competition.

Establishing this understanding is an important first step in any positioning/image communications program, because it helps the organization or those communicating the message judge

- *what* it needs to communicate,
- *how* aggressively to communicate, and
- *to whom* the communications should be targeted.

The study's core objectives are to:

1. understand the rational and emotional associations toward UFOs/ETI as it relates to people's lives – this goes beyond just determining awareness and attitudes toward CSETI/PSC;
2. determine attitudes and perceptions about issues that are likely to affect belief of UFOs/ETI as CSETI/PSC makes its presentation of the facts and evidence; and
3. identify a unique, ownable positioning for CSETI/PSC which is viable for getting its messages out in a systematic, believable, and credible fashion.

The research should also help determine the degree of global consistency in strategy that is called for and how much regional or cultural adjustment is needed.

Information Objectives

This project will provide information that helps CSETI/PSC develop a coordinated communications strategy. While the final information agenda will be developed when CSETI/PSC authorizes The Wirthlin Group to proceed, the following outline provides the general framework.

1. Determine and understand how to improve on how the UFO/ET issue is perceived today, relative to competitors (the disinformation campaign against the existence of UFOs), among target audience subgroups (general public and government and business leaders).
 - Awareness, familiarity, favorability, strengths and weaknesses.
2. Identify the underlying motivations which drive current perceptions of UFO/ETs which could form the basis for a compelling positioning.
3. Understand differences which exist by region of the globe or different cultures and target audience subgroups to support the existence of UFO/ETs.
4. Identify what potential positioning(s) and image attributes will strategically strengthen and differentiate CSETI/PSC relative to its competitors (governments, science, covert groups).
5. Identify who might be the best spokespeople for CSETI/PSC in releasing this information.

The bottom line objective is to provide information on positioning, message formulation and targeting that can be used to effectively communicate a message to the general public, government and business leaders about the existence of UFO/ETs.

Fieldwork Markets

In selecting markets for the research, we felt it important to consider the following:

- * **Geographic and cultural diversity.** A mix of countries around the globe, on different continents, and in different climates will maximize the generalizability of the research. Selecting markets with diverse cultural traditions will also ensure that any

positioning we derive from the research) will apply across disparate cultural and religious groups, and forms of government.

With this criteria in mind, here are markets we believe would be good ones for the initial research that is aimed at developing a global positioning for CSETI/PSC and a statement of the reasons why that market was selected:

United States Largest media market in the world. Many of the witnesses are from the U.S. and much of the evidence has been studied here by our government. The U.S. has a highly developed economy and has a great mix of all types of cultural and religious backgrounds.

Japan Japan is almost certainly the most influential market in the Pacific Rim and offers a culture that is extremely different from the U.S. Japan has a highly developed economy.

Turkey Nominally a European country, Turkey's culture is predominantly both Mediterranean and Middle-Eastern in flavor. Turkey's has a developing economy.

Brazil Firstly, Brazil is a South-American country, with a developed economy with a distinctively Latino culture and ethos.

India India is an Asian country and has the largest Hindu population.

Respondents

For the initial research, we believe it is important to sample widely from the various community stakeholders. For this reason we have designed the first part of the research (see Details on Design Section below) to include the following groups in every market that we use:

Business, Government and Other Opinion Leaders in Finance and Media.

While these are separate groups in the United States and other similarly-structured economies, the lines between the groups may be blurred elsewhere. Individuals in these positions often occupy either facilitator or gatekeeper positions in areas where CSETI/PSC hopes to communicate its messages. It is crucial to consider their points of view when developing a global positioning for CSETI.

General Public: It is important to get a mix of demographic groups among the general public such as education, age, income, gender and religion.

Summary of the Research Approach

Step 1: Develop Global Positioning Alternatives

1. Planning meetings/discussions/brainstorming with CSETI/PSC research team
2. Finalize Research Design

Step 2: Select Global Positioning (Tentative Design)

3. Qualitative exploration for positioning development -- United States.
 - VISTA™ (U.S. general public, government and business leaders), and
4. Quantitative validation of the VISTA™ findings by using the Wirthlin Group's National Quorum.
5. Presentation/discussion/use of results to CSETI/PSC research team

Step 3: Define Implementation Process - Information Roll-out/International press happening (tentative Design).

6. Review of results/planning for communication uses and implementation of quantitative tracking as an ongoing process.
7. Quantitative research to extend learning to a worldwide scope and to benchmark key audiences (Worldwide general public, government and business

leaders worldwide). (Step 7 is fully dependent on budget restraints and CSETI/PSC desire to gain an international view of the issue).

8. Presentation of quantitative results to the CSETI/PSC research team.
9. Work with CSETI/PSC to assist in adjusting, communicating and implementing findings internally and externally.

Details on Design, Implementation, and Analysis

Whenever faced with global research needs, the issue of scope must always be addressed. The Wirthlin Group has developed a research design, which will optimize the necessary positioning requirements on a global scale, but without the need to do interviewing in every country, building on prior research to the extent possible. Again, a global scope will only be taken if CSETI/PSC chooses to take that course of action.

We have chosen to address the positioning issue on a regional basis, thereby selecting key countries in each region to represent that area. We feel this design will reflect the desired level of coverage required geographically in order to develop a worldwide positioning at a regional level without creating an overly massive research undertaking.

VISTA™ Worldwide

Values (VISTA™) research will be conducted to clarify our understanding of underlying motivations of members of the general public and government and business leaders with regard to the UFO/ETI issue. We recommend that interviews be conducted in the United States, one country in the European region (Turkey), one country in the Pacific Rim region (Japan), one country in central Asia (India) and one country from an emerging region like South America (Brazil). Further discussion with the CSETI/PSC team may identify additional or alternative countries for this key phase of research.

Philosophy

The following principles are used by The Wirthlin Group for the development of a strategic communications program. Since they are an integral part of our study, our research results will address each point.

- First, messages do not operate in a vacuum. Messages must be evaluated in light of other competing messages and the strengths of other competitors.
- Second, a strategy should build upon any positive impressions that currently exist.

- Third, the strategic positioning for communication of an organization's position must be broad enough to endure over a long period of time and under a variety of circumstances.
- Fourth, the communication strategy must be consumer driven. Target audience research provides us with knowledge of audience concerns as they are expressed by the audience.
- Fifth, the communication strategy should not oversell. However, the strategy can and should raise the aspirational levels and the strengths of the communicator among target audiences.
- Sixth, the communications strategy should be unified, despite a variety of audiences, channels, and programs. In other words, its various executions must be based upon a common strategic underpinning that will resonate with all stakeholder groups.
- Finally, the communication strategy must not be easily countered by the media or by competitors. It must be built to withstand hostile fire.

The Wirthlin Group has developed an approach which assists clients in a strategic communications assessment. The basic philosophy of the Values In Strategic Assessment (VISTASM) approach is as follows.

- There are 20-25 personal values which drive behavior in humanity all over the world. These values include, but are not limited to, self esteem, personal security, self preservation, eternal salvation, love of family and peace of mind, etc.
- We must identify the personal values that are most dominant in driving behavior for a given decision (such as whether one believes in UFO/ETIs).
- We must also identify the tangible aspects of the idea offered which drive these personal values and the consequences or benefits which result from the tangible aspects.
- We can then understand the "pathways of thought" which drive behavior.
- By positioning an idea which triggers these important "pathways of thought" or "perceptual orientations" -- and -- by communicating to audiences in a way that triggers these important personal values, we can actually affect the audience's choice and behavior. Furthermore, we can use this information to drive decisions and positions in the future.

Method

The data collection technique is called VISTA™/Values Interviewing. These are intensive, in-depth, one-on-one interviews. They are conducted by Within Group interviewers who are skilled in psychological interviewing techniques. Throughout the interview, a process referred to as "laddering" is used to identify each respondent's pathways of thought. For example, the interviewing protocol may include a question such as:

- "What do you consider to be the most important aspect of the UFO/ETI disclosure?"

The interviewer records the differences cited, then uses probes to develop a "ladder". For example, let's say that a respondent feels that CSETI/PSC has provided them information which allows them to make up their own mind on the issue.

The interviewer would use probes such as the following.

- Tell me more about "being able to make up your own mind on the issue."
Is it an important issue to you?
What difference does it make to you personally?
Why is this an important issue in your life?

A hypothetical ladder might be as follows:

Attribute (Tangible Aspect)	"Release of information about extraterrestrials"
Consequences/Benefits	"Maybe we can learn from them. We might make new/innovative/startling scientific discoveries which might vastly improve the medical field. We could find cures to many diseases. We would be able to live better and feel more healthy."
Value	"I feel better about my life. I can do more with my time. I have peace of mind."
	(Values triggered = Security, Accomplishment, Peace of Mind)

Importantly, it is not the end point (value) which alone is consequential. Instead, it is identifying the entire set of dominant linkages (attributes to consequences/benefits to values) which is critical and which will aid in the development of an effective communications strategy.

If the above hypothetical example were to be a dominant (i.e. frequently cited) ladder in the research versus the competition, we would recommend that CSETI/PSC incorporate it in a values-driven positioning/communication. Our philosophy is that values-driven

communication should enable the communicator to "persuade by reason and motivate with emotion." To do so, one would do the following, based on the hypothetical example:

- In advertising or other communication, explicitly demonstrate the attributes and consequences (benefits) of the revelation of being able to cure disease and save lives
- Implicitly convey emotional consequence of less worry and the underlying values of Security, Accomplishment, Peace of Mind. Visual cues can be effective in communicating these underlying dimensions.

Each interview is expected to last 1 - 1/2 hours in order to collect the information needed

Sampling

Given the intensity and depth of the interviews and the quantitative rigor of the analysis, our experience shows that conducting 15-20 interviews per audience category, across a number of locations, provides adequate linkages/interpretations for each target audience and country. However, because we want to start in the United States where the message would probably originate and be scrutinized first, we propose that more interviews be done in the U.S. Below is the number of interviews by target audience and site location:

	<u>U.S.</u> <u>Sample</u>	<u>Japan</u> <u>Sample</u>	<u>Turkey</u> <u>Sample</u>	<u>Columbia</u> <u>Sample</u>	<u>India</u> <u>Sample</u>	<u>Total</u>
<u>Target</u> <u>Audience</u>						
General Public	40	15	15	15	15	100
Gov/Bus Leaders	40	15	15	15	15	100

Other details regarding the methodology follow:

- Recruiting is carefully controlled to ensure profiles which coincide with actual population
- A comprehensive training and protocol briefing is conducted with the interviewers
- Interviews will be conducted in one or two locations in overseas countries and in up to three locations in the United States.

Observation. Two of our colleagues are conducting this facility with one-way mirror for this pre-test to evaluate and refine the interview protocol and process.

- Though client observation is always encouraged after the pre-test during the actual interviewing phase, The Wirthlin Group reserves the right to be present with observers at all such occurrences. If requested, additional time, travel costs, and facilities charges will be added to that phase of the project.
- Once the interviewing is completed, we recommend holding a debriefing session with the interviewers to obtain their "top-of-mind" responses to the information they learned. Typically this works best in a face-to-face meeting, but a conference call could be established as well.

Analysis

At the conclusion of the values research, CSETI/PSC will have a very thorough and complete understanding of target audiences' perceptions about the UFO/ETI issue. One of the primary deliverables for this research will be comprehensive values maps. These maps depict the dominant pathways of thought with regard to how consumers think about CSETI/PSC, extraterrestrials and the affect of this information on their daily lives, religious beliefs and the government.

- These maps reflect the associations consumers make when selecting or thinking about extraterrestrials. The association will provide guidance for how best to build CSETI/PSC's positioning by tapping into the attributes and benefits which are important to the target audience. The assessment will also address communications issues including recommendations for a communications strategy (and message elements) which will be most effective in motivating audience support (based on the values ladder).
- A byproduct of this process will also be a detailed lexicon, providing insight as to how respondents think about and articulate their feelings about UFOs and ETs.

After the conclusion of this phase of research, CSETI/PSC will have the elements critical to the development of an international positioning.

• An assessment of the critical drivers toward belief of extraterrestrials on a global basis.

- An assessment of alternative positionings.

In total, these information components will be used to develop and support the global positioning imperatives for CSETI/PSC.

Quantitative

Quantitative research will then be used globally, completed first in the U.S., to further define awareness and perceptions of extraterrestrials and to provide a benchmark against which target audiences can be tracked in the future.

Purpose

The objective of the quantitative research is to provide an ongoing process to validate and extend our knowledge of CSETI/PSC's messages with qualified respondents throughout the world to determine the best, most motivating, and most relevant positioning for bringing out CSETI/PSC's information about extraterrestrials. This phase of the research, when combined with data from the VISTATM phase, will also provide a benchmark for subsequent tracking of CSETI/PSC's communications.

Specific objectives of this research are as follows:

1. To quantify target audience awareness and perceptions of extraterrestrials.
2. To define the specific elements which "drive" target audience perceptions of extraterrestrials and the opposing views.
3. To assess similarities and differences between and against public perceptions from different areas of the globe.
4. To identify the positioning which will have the most salience for CSETI/PSC in terms of believability of their information about extraterrestrials.
5. To benchmark these opinions and attitudes with metrics that can be tracked in subsequent research to assess CSETI's positioning and communication efforts.

Method

In the initial phase of research, we recommend including a number of metrics designed to quantify the key elements of communicating the extraterrestrial issues to the public. As mentioned earlier, these results will be used in the design and implementation of subsequent phases of research. We will work with CSETI/PSC to ensure that the selected measurements provide a valid and comprehensive basis for benchmarking public perception on communication elements.

Implementation

To quantify, benchmark, and track perceptions beyond the values phase of research, we will use the Wirthlin Group's National Quorum. A shared cost omnibus telephone survey which is run twice a month. This survey has a sample size of 1000 and is fully representative of the U.S. population. We would expect to ask approximately 15 closed-end questions and 2 open-ended questions.

If CSETI/PSC chooses to validate the VISTA™ findings internationally, we would use a quantitative methodology known as Q-Sort. Survey methodologies in these other countries require an in-person, one-on-one approach.

What is Q-Methodology?

Q-Methodology was developed in the 1950's by William Stephenson, a psychologist who was studying family dynamics. Q-Methodology has two components: Q-Factor Analysis and Q-Sort, the method of collecting the data.

Unlike the more familiar R-Factor Analysis, which collapses across respondents for various measures taken at one point in time, Q-Factor Analysis produces factor scores for each respondent across all factors, i.e., collapsing across measures for respondents taken at one point in time. Importantly, other methods of analysis may also be used with data collected using the Q-Sort technique.

Q-Sort allows respondents to simultaneously evaluate a large number of objects (concepts) in terms of two anchoring concepts. Through a sequential sorting process, respondents arrange these items in a quasi-normal distribution. For analysis purposes, numerical values are assigned to items or groups of items. Through careful selection of the items to be sorted, various hypothesis can be tested using multivariate analyses. Because successive sorts, either by different respondents or by the same respondent using different concepts, produce identical distributions -- equal means and standard deviations -- it is very easy to make comparisons across respondents, items, and anchoring concepts.

ABILITY TO PERFORM WORK

Corporate Capabilities

Since its inception in 1969, The Wirthlin Group has conducted research for many of America's largest corporations, including over 50 Fortune 100 firms. While well known for political polling, the firm primarily serves corporations, industry associations, non-profit organizations, government organizations, consulting firms and advertising agencies. The Wirthlin Group has completed approximately 7,000 research projects to date.

Why Wirthlin?

While we hope that this proposal and the associated discussions provide testimony to why The Wirthlin Group represents the ideal research partner for CSETI on this undertaking, we want to briefly summarize those aspects of our corporate persona that make this so.

1. We are experts in positioning research. The Wirthlin Group has been a pioneer in the use of attitude research to model corporate and organizational image. We have successfully conducted projects similar to the current one for over 80 organizations and individuals. We utilize innovative research techniques to identify underlying motivations which go far beyond traditional survey methods.
2. We are experts in multi-country research. The Wirthlin Group has conducted numerous studies which span five or more countries. We develop alliances with the best research companies across the world and work closely with them to ensure that all phases are conducted to our exacting specifications. Examples of international studies we have conducted are included in this proposal.
3. We adhere to the highest quality standards. In fact, The Wirthlin Group was selected by the American Quality Foundation as a research partner.
4. We help our clients. Our capabilities go beyond simply conducting research; rather, we work with our clients before and after the research is conducted to assist in implementation, internal and external communication and other important components which will impact the total success of the program.
5. Our staff represents a wide range of talents and experience. In order to provide our clients with a broad understanding of image and positioning, our staff members come from a variety of disciplines, including marketing, international affairs, economics, advertising, psychology, politics, publishing, and others.

Research Team

The key members of the research team include Dr. James A. Hoskins, Dr. John Norton, James Granger, and Chris Moessner. Dr. Richard B. Wirthlin and Dr. Tom Reynolds will be available for strategic advice throughout this research program.

Members of the team are predominantly from the Communications and Marketing Team at The Wirthlin Group. John Norton is from our "think tank" organization, Wirthlin-Reynolds, and will actively participate in the design and analysis of the values research.

Other research staff members and technical specialists of The Wirthlin Group will be involved at appropriate stages. To aid the process, The Wirthlin Group will provide schedule updates and progress reports throughout the project.

Dr. James A. Hoskins, Vice President will serve as the principal investigator for CSETI's research program and will be responsible for the overall management of the project team and their research activities. Jim has more than twenty-two years of experience in designing, conducting, and leading technical, cross-functional research studies, providing policy advice to senior government and corporate leaders.

Since joining The Wirthlin Group in 1989, Jim has designed and directed more than 120 separate studies for corporate and government clients and has acted in liaison with a number of public relations and advertising firms. Jim has conducted studies that focus on environmental issues, agricultural policy and product positioning, corporate image modeling, advertising design and testing, employee studies, and customer satisfaction.

- Jim is the Program Manager for computer assisted telephone interview (CATI) studies conducted with Department of Defense employees through an indefinite quantities contract with the United States Air Force. From 1990-1994, he was also the corporate point-of-contact for the Master Agreement with the United States Postal Service to perform customer satisfaction and marketing research.
- Jim was selected by the American Quality Foundation to lead a joint *The Wirthlin Group - The University of Michigan* effort to design and prototype the American Customer Satisfaction Index.
- As part of The Wirthlin Group executive team charged with developing a major communication strategy for an industry leader, Jim participated in the design and analyses of surveys among government representatives, corporate leaders, and the general public in the United States, United Kingdom, Germany, and France. The focus of the communication strategy was international corporate reputation and international trade issues.
- Most recently, Jim has conducted research to help set strategic direction and communications supporting public affairs and corporate advertising. Current television ad

campaigns that he has helped develop include Chemical Manufacturers Association, American Plastics Council, and a major paper and forestry products company.

- Jim has been the principal investigator for a number of multi-language paper and pencil surveys
- In addition, Jim was the principal investigator for a major chemical company's customer satisfaction study. The study involved telephone interviews, focused-group discussions, and in-person interviews with management, workers, and customers. The overall objective of the study was to evaluate the company's business unit using the Malcolm Baldrige National Quality Award as the criteria to gauge success.

Jim attended the United States Air Force Academy, where he was awarded a Bachelor of Science degree in Economics. He has received a Master of Arts degree in Economics from the University of California at Los Angeles and a Doctorate of Philosophy in Economics with a minor in Industrial Engineering from Iowa State University. His areas of specialization include international trade and finance, econometrics, and agricultural finance.

Jim was a member of the National Academy of Sciences, National Research Council, Committee on Military Enlistment Standards from 1991-1994, and he is a charter member of The Conference Board's Council of Human Resources Executives. He is published in a number of professional journals and is coauthor of an award-winning book examining recruiting and manning alternatives for the United States Air Force.

Dr. John Norton, Vice President of Wirthlin-Reynolds will assist in the design and analysis of the Values research.

For the ten years prior to joining Wirthlin-Reynolds as vice president, John Norton served on the faculties of George Mason University's School of Business Administration, the Graduate School of Business of the University of Chicago, and the Darden Graduate School at the University of Virginia. At those schools, he taught Industrial and Governmental Marketing, Marketing Management, and Marketing Research. His research into aspects of industrial marketing management appears in such journals as Management Science, Marketing Science, Sloan Management Review, IEEE Transactions on Engineering Management, and The International Journal of Forecasting. He was the co-recipient in 1987 of the Institute of Management Sciences' John D.G. Little Award for the best paper in the field of Marketing science. In addition to his scholarly research, he is the author of numerous cases and technical notes, and co-author of a set of courseware entitled Advanced Multivariate Statistics for Marketing Managers. His teaching awards include the First Wachovia Award for Excellence in 1989 and the GMU MBA Association's Outstanding Teacher Award in 1994.

John has extensive management development experience, particularly in the area of business-to-business marketing management. Active in GMU's pilot executive development programs with CSETI, he served as a designer, discussion facilitator, and faculty leader for a number of those programs.

PROJECT SCHEDULE

We are prepared to start this assignment when authorization is given. Our ability to complete the program of research will be tied to CSETI/PSC's ability to respond at critical junctures in the schedule, as noted. Also, the schedule will have to work around the availability of our highly trained, professional, interviewers and the holiday seasons as they are celebrated around the world. Barring these issues, we anticipate the VISTA™ and quantitative research will be completed within 4 months.

GLOBAL POSITIONING

VISTA™ - QUALITATIVE

John's skills and experience relevant to the current project include familiarity with fuels, lubricants, and distillates marketing, specifically with regard to CSETI, and generally with regard to the petroleum industry. His work with advertising assessment, academic studies involving mathematical modeling of distribution systems, executive development projects, and economic studies with applications to governmental policy. In 1991, he and Alan Bechenstein, an economist at the University of Virginia, conducted a study under the sponsorship of the Virginia Petroleum Council. Their findings, published in "A Report to the Joint Subcommittee studying Retail Divorcement and Representative Offering Legislation," were used to defuse impending divorcement legislation in Virginia and elsewhere.

John earned a degree in Psychology from the University of North Texas, and his MS and PhD in Management Science with a minor in Statistics at the University of Texas at Dallas.

Chris Moessner, Research Manager, will assist the primary research investigator in coordinating the daily tasks. Chris will also assist in the design of the instruments, sampling, fieldwork, data processing, analysis, report writing.

Chris has successfully directed over 50 separate studies and has played a key role in studies for corporate and association clients. His focus is corporate communications, customer satisfaction, product development, and employee and community issues. Mr. Moessner has over five years of experience conducting telephone, focus groups, and in person interviews.

Chris has experience with several corporate communication projects where strict timelines were adhered to in order to present timely, actionable results. In addition, Chris has conducted all phases of a several nationwide values and computer assisted telephone surveys for the Chemical Manufacturers Association, the American Plastics Council, and a leading forestry and paper products company. Chris also has experience in the health insurance, health care, and furniture industries.

Chris earned undergraduate degrees in both Sociology and Marketing from Roanoke College.

Field Services

The Wirthlin Group will work with a local market research company in each city (country). Our in-house field coordination staff, headed by Phyllis Rundquist, has extensive experience with field services around the world and routinely selects services on the basis of their general expertise coupled with their experience and familiarity with the specific type of marketing research being requested. In addition, all companies are well-respected for their honesty and treatment of confidential information. Communication with the U.S. is facilitated by the English fluency of senior research personnel of all non-English speaking countries. Additionally, The Wirthlin Group has senior professionals who are fluent in French, German, Spanish, Japanese, and Turkish. Phyllis and her staff are our daily liaison with each of the field services we use for research.

The proposed to start and assignment when authorization is given. Our ability to complete the program of research will be tied to CSETI/PSC's ability to respond at critical junctures in the schedule, as noted. Also, the schedule will have to work around the availability of our highly trained, professional, interviewers and the holiday seasons as they are celebrated around the world. Barring these issues, we anticipate the VISTA™ and quantitative research will be completed within 4 months.

GLOBAL POSITIONING VISTA™ and QUANTITATIVE		
Cumulative Week Number	EXTERNAL AUDIENCES	EMPLOYEES

PROJECT BUDGET

Global Positioning (VISTA™)

and

Quantitative (In-Person)

<u>Task</u>	<u>Cost Estimates</u>
VISTA™/Quantitative Research in United States	
VISTA™ fieldwork and analysis	\$127,800
VISTA™ validation/quantitative in U.S.	\$27,500
If CSETI/PSC requests an International Validation	
International Coordination	\$20,000
Quantitative validation of VISTA™ findings by country	
Japan	\$58,500
Turkey	\$24,500
India	\$35,700
Brazil	\$28,900
Full report of Findings/Presentation of findings	\$12,500

Note: The total cost estimate will be based on the selection of countries for the VISTA™ and quantitative research. All United States-based costs are subject to a plus or minus 10% contingency and a 20% contingency is placed on all overseas-based costs.

These costs assume two up-front planning meetings as well as weekly updates, a preliminary presentation, and a presentation (to a larger audience) to overview the findings and implications. Additional meetings, work sessions or presentations will be billed at hourly rates.

This price quotation will remain valid for 60 days from the date of the proposal. Travel expenses will be billed separately at cost. Estimates of travel costs will be provided upon request.

The foreign components to these separate research steps are subject to variances in exchange rates. It is agreed that variances in exchange rates will be re-evaluated by both parties at the time of authorization of each phase.

The Wirthlin Group will submit and Client will pay invoices according to The Wirthlin Group standard policy - sixty percent (60%) upon authorization of each phase of the project and forty percent (40%) upon delivery of final materials for that phase. Should either party cancel this project for any reason at any time, The Wirthlin Group shall only invoice for services performed on the project up to the point of cancellation.

GENERAL PROVISIONS

1. The research price and timing commitments from The Wirthlin Group on this study are based upon the details summarized in this proposal. Included in the research price are two questionnaire revisions and one revision of the draft or the final report. Changes in project definition could necessitate budget and schedule revisions. Any changes to this agreement shall be in writing and signed by authorized representatives of both The Wirthlin Group and the Client. Notwithstanding the above, if the Client provides (or arranges for a third party to provide) the sample to be used for the research to be conducted, Client agrees to reimburse The Wirthlin Group for all additional costs incurred by The Wirthlin Group as a result of erroneous or incomplete sample information or lies to the extent the sample information or lies are not consistent with pre-defined sample specifications.
2. Our work for Clients is always conducted on a confidential basis and we treat all information developed for the Client in accordance with our strict security standards.
3. As required by The Code of Standards of the Council of American Survey Research Organizations (CASRO), we maintain the anonymity of our respondents. No information will be released that in any way might reveal the identity of a respondent.
4. Client may show any report produced by The Wirthlin Group in its entirety to interested parties, provided, however that any reproduction of any part of The Wirthlin Group's report for use outside the Client is subject to The Wirthlin Group's prior written approval. The research findings and report prepared by the Wirthlin Group on behalf of CSETI shall be the property of CSETI. The Wirthlin Group agrees not to use this information for any other purposes without verbal authorization from CSETI.
5. Although information provided hereunder will be based upon careful and professional sampling, interviewing and analytical tools and techniques, The Wirthlin Group's liability under this contract, if any, shall be limited to acts of gross negligence and shall be further limited to the research price and, in particular, The Wirthlin Group shall not be responsible for any consequential or other damages. Further the client expressly indemnifies The Wirthlin Group from any and all claims which may be brought by third parties arising out of any services performed by The Wirthlin Group under this agreement.
6. The Wirthlin Group may dispose of the interview records generated in this project six months after completion of the study unless the Client specifically requests otherwise in writing.
7. Payments shall be made to The Wirthlin Group, at 1365 Beverly Road, McLean, Virginia 22102 (or at such other address The Wirthlin Group shall specify) upon demand; and, if not paid when due, shall become a indebted debt and shall bear interest from due date at the rate of one and one-half percent (1 1/2%) per month.
8. Should any dispute whatsoever arise between The Wirthlin Group and the Client under this Contract both parties shall submit the matter to one arbitrator located in Washington, D.C., appointed either (or selected by The Wirthlin Group if necessary) and governed by the rules of the American Arbitration Association, whose decision shall be final and binding upon both parties. Further, the losing party shall bear all costs of any such arbitration including but not limited to, reasonable attorneys fees.
