Effects of low power microwaves on the local cerebral blood flow of conscious rats
Hi Steve:

It was great to see you. Here is the NASA paper on psychotronics. I was glad to find this Web Site still active.

I'll be in touch...

Many blessings to you,

To: [REDACTED]

NASA Subject Category: LIFE SCIENCES (GENERAL)

Abstract:

A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwaves. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate (regardless of the person's position in the field) within or just behind the head. The phenomena occurs at average power densities as low as microwatts per square centimeter with carrier frequencies from 0.4 to 3.0 GHz. By proper choice of pulse characteristics, intelligible speech may be created. Before this technique may be extended and used for military applications, an understanding of the basic principles must be developed. Such an understanding is not only required to optimize the use of the concept for camouflage, decoy and deception operations but is required to properly assess safety factors of such microwave exposure.

Major Subject Terms:

AUDITORY PERCEPTION BRAIN CIRCULATION DECEPTION MICROWAVES
PHYSIOLOGICAL EFFECTS RADIATION EFFECTS

Minor Subject Terms:

BIOLOGICAL EFFECTS HEMODYNAMICS MILITARY TECHNOLOGY RADIATION DOSAGE
SOUND LOCALIZATION
