

Re: translation of the letter dated 16th January 2007

Dear Sirs,

On January 14, official imperatives did not allow the top ranking representation of the French Ministry of Defence (MOD) to assure its presence for the tests and attempted contacts beginning on the fourth week of this year 2007.

The signing officers of this document ask respectfully for apology on behalf of the MOD for this temporary inconvenience.

Indeed, it is only a temporary delay and the MOD requests all participants to postpone this meeting.

Due to short term political imperatives, the MOD is obliged to request, according to the wishes of the participants concerned with the feasibility of the operation, a report of the tests and the contacts to be scheduled for the 24th or the 25th week of this year.

Please take into consideration the full determination and the active collaboration of the MOD at its highest level regarding the interests of France and its scientific environment.

A protocol of reciprocity of acquired knowledge during the scheduled experiments of the signing officers in close connection with SPORADE will supply all necessary means of materials, human resources and financial support.

This protocol will be based on four categories of specs in coordination with the needs and efforts according to your recommendations with the support and help of the MOD.

- 1) Identification of the source , procedure and recognition
- 2) Biological, physico chemical, relative fields, miscellenous language(laser, Mfp,...)
- 3) Quality of source / To document the quality of source, biological if possible, in relation with the validation of our entries and contacts makes this category crucial.
- 4) Availability of the source / this category regroupes the fields regarding contact probabilities and future exploitation of the above mentioned.

The collaboration of the delegation (representation) of the MOD with its full technical backing requires the agreement from each party on the process / analysis, specification, conception, implementation of necessary means for exploiting the scientific results.

These results must allow us to conclude on a performance evaluation system in the elaborated framework of one or more action models regarding the objectives brought for through your experimental proposition and the electronic and optic means you wish to use that we accept to put at your disposal during your stay in France.

Our will to participate is not only to see the first level identification of the course but to confirm the experimental tracking and the results of all levels and categories obtained.

Besides the fact that our imperatives forbid us to take part during the 2 coming weeks, the request of the means to be put at your disposal in absence of all circumstantial recommendations did not allow us to account to our superiors with all the required scientific certainty and to engage a process of long term exchange on this experimental field with you.

In the hope of your understanding and respect for our political imperative that will become a certain commitment and our will hereby affirmed to proceed on an exhaustive journey with you on this topic, we will be able to erase the disappointment of the postponing- by us- of the first contact expected at the end of this month.

On behalf of our representation, I am pleased to wish you all the best for this coming year and outstanding results for our two countries.

MOD
