2 photos not shown, report "unclassified" 11-2-89, R. J. L. Conn

Objects observed following MX 776A test of 27 April 1950

2nd Lt [REDACTED] EHOSIR

15 May 50 1

1. According to conversation between Col. Baynes and Capt. Bryant, the following information is submitted directly to Lt. Albert.
2. Film from station P10 was read, resulting in azimuth and elevation angles being recorded on four objects. In addition, size of image on film was recorded.
3. From this information, together with a single azimuth angle from station M7, the following conclusions were drawn:
 - a. The objects were at an altitude of approximately 150,000 feet.
 - b. The objects were over the Holloman range between the base and Tularosa Peak.
 - c. The objects were approximately 30 feet in diameter.
 - d. The objects were traveling at an undeterminable, yet high speed.

ext 172

The other two movies were made at the White Sands Proving Grounds with Aikania Cine theodolites—scientific tracking cameras for following guided missiles. The first was made on April 27, 1950. Shortly after a missile was fired and had soared into the atmosphere and fallen, someone spotted an object in the sky. The theodolites were braked up by an intercom system, and several stations were instructed to try to get pictures. Unfortunately only one camera had film. The pictures showed a smudgy, dark object, not very well defined. It was moving.
