Dan, Just a quick update for you and Steve.

I spoke with [REDACTED] yesterday. The small output unit based on our design has been brought back and "works" although it has not yet been rigorously tested in Canada, so I will reserve my judgment on that. They had no problem with customs. They plan to refine the circuits, test it more rigorously, and then make a complete set of specifications all over the next two weeks. As soon as we have specs in hand I will get them to you so you can reproduce them using the base you have. I will push them to get at least preliminary specs as soon as possible, but I don't want to start to order stuff until we know for certain what they are. We have already done enough of that. At that point (about 2 weeks from now - Dec 7-9), they will bring the system to DC for our testing, etc. DL decided that the 1 kw system was not large enough, so is in a redesign phase. Who knows when that will ever be ready. Meanwhile if the 400 watt system works as advertised we can at least start to move forward. Interestingly enough, we now know that DL has other issues than just a mad ex-wife to deal with in Canada, so I do not expect to see him either here or there for a long time, if forever. Why am I not suprised?
